With its fast onset of action, it is particularly suitable for the management and prevention of attack in mild asthma and for the treatment of acute exacerbation in moderate and severe asthma. Salbutamol provides short-action (4 hour) bronchodilation with fast onset (within 5 minutes) in reversible airways obstruction due to asthma. It is suitable for long term use in the relief and prevention of asthmatic symptoms. Ventolin should be used to relieve symptoms when they occur and to prevent them in those circumstances recognised by the patient to precipitate an asthma attack (e.g. before exercise or unavoidable allergen exposure). Ventolin is particularly valuable as rescue medication in mild, moderate or severe asthma, provided that reliance on it does not delay the introduction and use of regular inhaled corticosteroid therapy.</p> <p>POM</p>	31st October 1994

12365/0003	Laboratoires Ethypharm	Ethypharm Doxycycline Capsules 50 mg	Doxycycline Hyclate EP 57.70 mg (equivalent to Doxycycline base 50.00 mg)	As a bacteriostatic antibiotic, doxycycline is clinically effective in the treatment of a variety of infections caused by a wide range of gram-negative and gram-positive bacteria, as well as certain other micro-organisms. Its principal indications are the following: Pneumonia respiratory tract infections: Pneumonia and other lower respiratory tract infections due to susceptible strains of streptococcus pneumoniae, haemophilus influenzae, klebsiella pneumoniae and other organisms. Mycoplasma pneumoniae pneumonia. Treatment of chronic bronchitis, sinusitis. Genito-urinary tract infections: Cystitis, urethritis, pyelonephritis, caused by susceptible strains of escherichia coli, neisseria gonorrhoeae, the klebsiella-enterobacter group, staphylococcus species and chlamydia trachomatis. A single dose of doxycycline has effectively treated acute gonococcal anterior urethritis in the adult male. However, a more extended therapy elicited the highest cure rates. Soft tissue infections: Infected traumatic and postoperative wounds, furunculosis, impetigo, cellulitis, abscess and pyronychia, caused by susceptible strains of the klebsiella-enterobacter group, as well as susceptible strains of staphylococcus aureus, streptococcus species, E. coli and staphylococcus albus. Doxycycline treatment of soft tissue infections should always be carried out in conjunction with any necessary indicated surgical procedures. Dermatological infections: Acne vulgaris and acne conglobata. As doxycycline is one of the tetracycline group of antibiotics, it may be expected to be useful in the treatment of infections which respond to other tetracyclines such as: Gastro-intestinal infections: Caused by susceptible strains of such organisms as shigella species, salmonella species, enterococcus histolytica and enteropathogenic E. coli. Ophthalmic infections: Caused by susceptible strains of staphylococci, gonococci and haemophilus influenzae. Doxycycline is indicated for the treatment of inclusion conjunctivitis either alone or in combination with topical agents. Doxycycline is also suitable in the	11th August 1994
