				2. Abnormal Retention of Fluids Acetazolamide acts on the reversible hydration of carbon dioxide and hydration of the carbonic acid reaction in the kidney resulting in renal loss of biocarbonate ion which carries out sodium, water and potassium. It can be used in conjunction with other diuretics when effects on several segments of the nephron are desirable in the treatment of fluid retaining states. 3. Epilepsy When used in conjunction with other anticonvulsants best results have been seen in petit mal in children. Good results have been seen seen in both children and adults with grand mal, mixed seizure patterns and myoclonic jerk patterns.	
12724/0076	GM Laboratories Limited	Diazepam Tablets BP 2 mg	Diazepam BP 2.00 mg	Prescription Only Medicine 1. Relief of Anxiety For the short-term relief (2-4 weeks) only of anxiety that is severe, disabling or subjecting the individual to unacceptable distress, occurring alone or in association with insomnia or short-term psychosomatic, organic or psychotic illness.
