				ment and prevention of infection in wounds, including burns, varicose ulcers and bed sores.	
00031/0498	Roche Products Limited	Neupogen Syringe 10mu	Filgrastim 10.000mu	Prescription Only Medicine For the reduction in the duration of neutropenia and the incidence of febrile neutropenia in patients treated with established cytotoxic chemotherapy for malignancy (with the exception of chronic myeloid leukaemia and myelodysplastic syndromes) and for the reduction in the duration of neutropenia in patients undergoing myeloablative therapy followed by bone marrow transplantation in patients considered to be at increased risk of prolonged severe neutropenia. Neupogen is indicated for the mobilisation of autologous peripheral blood progenitor cells alone, or following myelosuppressive chemotherapy in order to accelerate haematopoietic recovery by infusion of such cells, after myelosuppressive or myeloablative therapy. The safety and efficacy of it are similar in adults and children receiving cytotoxic chemotherapy. In patients, children or adults, with severe congenital, cyclic, or idiopathic neutropenia with an ANC of $\leq 0.5 \times 10^9/L$, and a history of severe or recurrent infections, long-term administration is indicated to increase neutrophil counts and to reduce the incidence and duration of infection-related events.	21st April 1998
00031/0499	Roche Products Limited	Neupogen Syringe 30mu	Filgrastim 30.000mu	Prescription Only Medicine See PL00031/0498	21st April 1998
