The illuminating apparatus is a 5th order Fresnel lens, illuminating $\frac{3}{4}$ of the arc of the horizon.

The tower is joined to the end of the keeper's dwelling; is constructed of red brick; and its base is 68 feet above ordinary high-water mark. The height of the focal plane above the ground is 24 feet, and the light should be visible, in good weather, from the deck of a vessel ten feet above the water, at a distance of 15 nautical or 17 statute miles. Portland, Me., Dec. 8, 1853.

Sailing Directions for Carver's Harbour and Hurricane Sound, (Maine.)

WHEN the Lighthouse recently erected on Heron Neck is lighted (on the 6th February next,) the following directions, furnished by Capt. R. King Porter, for Carver's Harbour (a safe anchorage for vessels drawing 10 feet of water, and about 2 miles from Heron Neck Lighthouse;) and for Hurricane Sound (which is formed by Green's Island—on which the Lighthouse stands—on the east, and a range of Islands and ledges on the west side, a safe roadstead for vessels of any class,) will be found useful to Mariners.

FOR "CARVER'S HARBOUR."

Bring the light to bear north-east and run for it. Deep Water within a ship's length of the rocks. Half a mile from the light you will pass to the eastward of Deadman's Ledge (the Eastern Hurricane Ledge), dry at low water. One-fourth of a mile south by west from the light lies Heron Neck Ledge, always above water. Pass between the light and the ledge (a narrow but deep channel), and you will open Deep Cave on Green's Island—keep on in an easterly direction, giving the different points of Green's Island a berth of a cable's length. When up with the S. E. point, you will be near a dry ledge one-eighth of a mile from the point—leave it on the starboard hand—Carver's Harbour will then be in sight, and may be known by the houses around the harbour bearing N.E. by N., distant one mile. Give the east point of Green's Island, opposite the first house, a small berth and run for the harbour, leaving some dry ledges on the starboard hand. Keep nearest the starboard shore at the entrance of the harbour, to avoid some sunken ledges on the opposite side. Anchor in the middle of the harbour in 10 feet water at low tide—soft bottom—good holding ground and good anchorage.

FOR "HURRICANE SOUND."

Bring Heron Neck Light to bear N.E. and run for it; when half a mile from the light, you will pass Deadman's Ledge, which you will leave on your port hand, and when midway between the ledge and the light you will be in the entrance to

Hurricane Sound, which runs in a northerly direction.

Keep midway between Green's Island on the east, and the Islands and ledges on the west side, and when about a mile and a half above the entrance you will be near a dry rock; pass to the eastward of it, and anchor when you have room to give the rock a good berth.

There is anchorage all the way up the Sound, but the water is deep until you get above the rock.

By Order of the Lighthouse Board,

W. B. FRANKLIN,
Corps Topl. Engineers, and Inspector
1st L. H. District.

Portland, Me., December 8, 1853.

NOTICE TO MARINERS.

Proposed changes of Lights at Cape Hatteras, Body's Island, and Ocracoke, (Coast of North Carolina).

DURING this month (December) a temporary light will be placed outside of the Lighthouse tower at Cape Hatteras, about 10 feet below the present lantern (100 feet above the level of the sea), equal in power and brilliancy to the light now exhibited at that point.

The present light will be extinguished at the time of lighting the temporary light, for the purpose of elevating the tower, preparatory to placing upon it a First Order Fresnel Flashing Lens Light.

During the month of March next a First Order Fresnel Flashing White Light will be exhibited from the Cape Hatteras Tower, from an elevation of about 150 feet above the level of the sea, which should be visible under favourable circumstances, from an elevation of 10 feet above the level of the sea, about 18½ nautical miles.

This light will be recognized by observing that in every 20 seconds of time there will be an eclipse of 12 seconds' duration, followed by a brilliant flash of 8 seconds' duration—or in the same proportion, in every 15 seconds of time, there will be an eclipse of 9 seconds' duration, followed by a brilliant flash of 6 seconds' duration.

The approximate position of the Cape Hatteras Lighthouse, as determined by the coast survey, is—

Lat. 35° 15' 11" north.

Long. 75° 30' 33" west from Greenwich.

BODY'S ISLAND LIGHT.

Simultaneously with the exhibition of the flashing light from the Cape Hatteras Tower, the revolving light at Body's Island, about 32 nautical miles to the northward of Cape Hatteras, will be changed to a

Fourth Order Fresnel Fixed White Light, varied by alternate red and white flashes.

The focal plane of this light will be 50 feet above the level of the sea, and should be visible, under favourable circumstances, from an elevation of 10 feet above the level of the sea, at a distance of about 12 nautical miles.

The approximate position of Body's Island light, as determined by the coast survey, is—

Lat. 35° 47' 20".5 north.

Long. 75° 31' 20" west from Greenwich.

OCRACOKE LIGHT.

At the same time the present revolving light at Ocracoke, about 23½ nautical miles to the southward and westward of Cape Hatteras Lighthouse, will be changed to a

Fixed White Light,
with a focal plane 75 feet above the level of the

sea, and should be seen, under favourable circumstances, from an elevation of 10 feet above the level of the sea, about 13½ nautical miles.

The approximate position of Ocracoke Lighthouse, as determined by the coast survey, is—

Lat. 35° 06' 31".6 north.

Long. 75° 58' 27".4 west from Greenwich.

A more minute and detailed description of these towers, buildings, appearance by day, and the characteristic distinctions of the lights, will be published hereafter, and the precise day upon which these changes will be made, will be stated.

A dangerous shoal, with only 9 feet water upon it at low tide, with the Cape Hatteras Lighthouse bearing N. 37° W. (true), distant 8½ nautical miles, lies off this point, and Mariners should be careful not to run their vessels in bad weather, and especially at night, into less than fifteen fathoms approaching from the northward and eastward, and twelve to eleven fathoms approaching from the southward and westward.

THORNTON A. JENKINS,
Secretary.
