*Shoal Ground Southward of Litsitah Point.*

INFORMATION has been received of the existence of shoal ground extending southward of Litsitah Point, Fisher Island:—

In April, 1885, the French ironclad "*Triomphante*" struck on a rock southward of Litsitah Point, and from soundings subsequently taken in the vicinity, it was ascertained that shoal rocky ground extends half-a-mile southward of that Point.

In May, 1885, the British steam vessel "*Welcome*" also struck on a rock southward of Litsitah Point, and sustained considerable damage, it is considered that this rock is identical with that on which the "*Triomphante*" struck.

NOTE.—Vessels should not pass southward of Litsitah Point within the distance of about one mile.

*Continuance of Experimental Fog Signal on Fair Isle.*

WITH reference to Notices to Mariners, No. 29, of 21st February, 1885, and No. 94, of 16th May, 1885, on the establishment, on trial, for a period of about six months, of a rocket fog signal on Fair Isle.

The Commissioners of Northern Lighthouses have given further notice, dated 21st October, 1885, that the signal will be continued in operation for a further period of at least six months from 8th November, 1885.

A rocket will be fired every ten minutes, during fog or thick snow showers. These rockets will explode with a loud report at the height of about 800 feet above the sea.

Two sizes of rockets are intended to be used,—the smaller, with 4 oz. charges, will be used during fogs when the weather is calm; the larger, with 12 oz. charges, when the weather is thick and stormy, or during heavy snow showers.

NOTE.—The continuance of this fog signal for the above-mentioned period is experimental merely, and mariners are cautioned that they must not depend upon the certainty of hearing the warning signal when used, as the rockets are to be fired from the centre of the isle, which is about 3 miles long in a north and south direction, with a greatest breadth of  $1\frac{1}{2}$  miles.
