

The first part of the paper is devoted to a discussion of the
 general theory of the subject. It is shown that the
 theory is based on the following principles:

1. The theory is based on the principle of least action.
 2. The theory is based on the principle of relativity.
 3. The theory is based on the principle of causality.
 4. The theory is based on the principle of continuity.
 5. The theory is based on the principle of conservation of energy.
 6. The theory is based on the principle of conservation of momentum.
 7. The theory is based on the principle of conservation of angular momentum.
 8. The theory is based on the principle of conservation of charge.
 9. The theory is based on the principle of conservation of baryon number.
 10. The theory is based on the principle of conservation of lepton number.

The second part of the paper is devoted to a discussion of the
 applications of the theory. It is shown that the theory can be
 applied to the following cases:

1. The theory can be applied to the case of a particle in a potential well.
 2. The theory can be applied to the case of a particle in a magnetic field.
 3. The theory can be applied to the case of a particle in an electric field.
 4. The theory can be applied to the case of a particle in a gravitational field.
