8747/0099	Chemilines Limited	Ventolin Inhaler	Salbutamol 0.1 mg	<p>Prescription Only Medicine</p> <p>Salbutamol is a selective Beta-2 adrenoceptor agonist. At therapeutic doses it acts on the Beta-2 adrenoceptors of bronchial muscle, with little or no action on the Beta-1 adrenoceptors of the heart. With its fast onset of action, it is particularly suitable for the management and prevention of attack in mild asthma and for the treatment of acute exacerbations in moderate and severe asthma. Salbutamol provides short-action (4 hour) bronchodilation with fast onset (within 5 minutes) in reversible airways obstruction due to asthma. It is suitable for long term use in the relief and prevention of asthmatic symptoms. Ventolin should be used to relieve symptoms when they occur and to prevent them in those circumstances recognised by the patient to precipitate an asthmatic attack (e.g. before exercise or unavoidable allergen exposure). Ventolin is particularly valuable as rescue medication in mild, moderate or severe asthma, provided that reliance on it does not delay the introduction and use of regular inhaled corticosteroid therapy.</p>	3rd February 1995
