Copies of the Orders, which will come into force on 10th May 1999, and of documents giving more detailed particulars of the Orders can be inspected during normal office hours on Mondays to Fridays inclusive under the Orders cease to have effect (no longer than a period of 18 months from 10th May 1999), in the office of the Director of Environment, 25 Nelson Street, East Ham, London E6 6EH, from whom copies of the Orders may be obtained.

- to ensure that conservation areas include sites on or near the boundary that merit inclusion, and exclude sites which do not;
- to apply as far as possible consistent standards and criteria in all conservation areas when determining their boundaries.

The resulting boundary changes are small-scale, and their impact is to update the boundaries in the light of development since the original designation or the last review.

The Local Authority believes the redesignated areas to be "areas of special architectural or historic interest, the character or appearance of which it is desirable to preserve or enhance."

Plans showing the precise extent of, and revisions to, the above conservation areas are available for public inspection between the hours of 9 a.m. and 4.30 p.m. at Environment Services, New Forest District Council, Appletree Court, Lyndhurst. The properties directly affected by the boundary changes have been individually notified.

00053/0263	Schering Health Care Ltd	Nuvelle Continuous	Estradiol Hemihydrate 2 000 mg Norethisterone Acetate 1 000 mg	Hormone replacement therapy for the treatment of menopausal symptoms such as night sweats and hot flushes in women who are at least 1 year past their menopause and who have an intact uterus. Prophylaxis and treatment of the postmenopausal sequelae of oestrogen withdrawal, including atrophic vaginitis and atrophic urethritis. Although for maximum prophylactic benefit, hormone replacement therapy should commence as soon as possible, in the case of this product this should be at least one year past the menopause. If given in the earlier postmenopausal phase the incidence of bleeding is unacceptably high. Administration is continued without a break in therapy. The presence of continuous progestogen is designed to result in the absence of menstrual bleeding whilst also protecting against the development of endometrial hyperplasia. It does not consistently inhibit ovulation and is, therefore, unsuitable for contraception. Combined preparations containing an oestrogen and progestogen are only necessary in patients with an intact uterus.	12th January 1999
