04569/0359	Generics (UK) Limited	Cefotaxime Sodium for Injection BP 500 mg	Cefotaxime Sodium 524 000 mg	For the treatment of infections due to Gram-negative bacteria which are sensitive or resistant to first or second generation cephalosporins. Also active against a number of Gram-positive bacteria. For the treatment of the following conditions when caused by bacteria of known sensitivity or before the infecting organism has been identified: Septicaemias. Respiratory tract infections: bacterial pneumonia, acute and chronic bronchitis, infected bronchiectasis, lung abscess, post-operative chest infections. Urinary tract infections: acute and chronic pyelonephritis, cystitis and asymptomatic bacteriuria. Soft tissue infections: peritonitis, cellulitis, wound infections. Bone and joint infections: osteomyelitis, septic arthritis. Obstetric and gynaecological infections: pelvic inflammatory disease. Gonorrhoea including that unsuccessfully treated with penicillin. Meningitis. Other sensitive infections which may be suitably treated with a parenteral antibiotic. It may also be used prophylactically to reduce the incidence of certain post-operative infections in patients undergoing surgical procedures that are classified as contaminated or potentially contaminated or in clean operations where infection would have serious effects. To ensure that adequate local tissue concentrations are achieved at the time of contamination, it should be administered immediately before surgery and continued in the immediate post-operative period as necessary. Administration should usually be stopped within 24 hours as continuing use of any antibiotic in the majority of surgical procedures does not reduce the incidence of subsequent infection.	13th May 1999
