The Queen’s Awards for Enterprise 2020

The Queen’s Awards for Enterprise are the most prestigious awards for UK business, designed to recognise and encourage outstanding achievements in the fields of Innovation, International Trade, Sustainable Development and Promoting Opportunity (through social mobility). The Queen’s Awards scheme was instituted by Royal Warrant in 1965 and the first Awards were made in 1966.

This year, 220 UK businesses have been recognised for their contribution to international trade, innovation, sustainable development and promoting opportunity (through social mobility):

Four of these companies won awards in the categories of both Innovation and International Trade. These winners are:

- **Cut4Cloth** (International Trade and Sustainable Development)
- **Kwikbolt** (International Trade and Innovation)
- **Netcraft** (International Trade and Innovation)
- **Synchro Arts Limited** (International Trade and Innovation)
Queen’s Awards for Enterprise Categories:

Innovation
Innovation achievements are assessed for: invention, design or production of goods; performance of services; marketing and distribution; or, after-sale support of goods or services, that have realised outstanding commercial success over 2 years or continuous commercial success over 5 years.

International Trade
Winners have demonstrated that their business has achieved substantial growth in overseas earning and in commercial success (for their business size and sector) through either outstanding achievement over 3 years or continuous achievement over 6 years.

Promoting Opportunity (through social mobility)
This category recognises businesses and organisations that are providing high quality social mobility initiatives and programmes that specifically reach out and support people from disadvantaged backgrounds, in order to inspire and guide the best talent into their organisation and beyond.

The programmes include work experience, careers advice or mentoring for young people; offering non-graduate routes such as traineeships or changing recruitment practices; and, giving equal support and progression opportunities to all employees.

Sustainable Development
Winners in this category demonstrate commercially successful sustainable development practices. Sustainable development achievements are assessed for: invention, design or production of goods; performance of services; marketing and distribution; after-sale support of goods or services; or, management of resources or relationships with people and other organisations.

NOTES:
The Queen’s Awards Office accepts no responsibility for the accuracy of the details contained herein.
The summaries have been approved by the respective winners and are provided merely as a guide to assist the media.
‘Employees’ refers to the number of staff in the UK. Some organisations also have employees overseas.

Chorus Intelligence Limited

Chorus Intelligence Ltd are an SME based in Suffolk which was formed in 2011. The founder of the company used know-how from sifting large data sets in the financial industry and applied it to law enforcement creating Chorus Analyst, which is now used by 80% of police forces and all of the counter terrorism units in the UK. The software tool solves the problem of lengthy manual data cleansing and formatting by automating data processing. It also allows users to spot connections in the data that would otherwise remain hidden. The initial product has been further developed into a suite of tools. The suite includes Investigator, a tool for non expert operational officers to get rapid results from data evidence, Indexer and Plus, products that enable different departments and forces to share data and conduct cross case analysis and collaborate easier. The company wins the Queen’s Award for Enterprise in the Innovation category.

Dura Composites Ltd

Dura Composites Ltd is an Essex SME established in 1996. They won a 2017 Queen's Award for Enterprise - International Trade. The company has created a height-adjustable composite station platform that reduces platform-to-train gaps. After over a century of heavy use, many of the UK’s train station platforms require replacement as they reach the end of their service life. Traditionally concrete is used but this can require large sections of track to be temporarily shut down for costly building work to take place. Dura Platform allows contractors to replace or overlay onto damaged or subsided platforms a low maintenance, height adjustable glass reinforced plastic (GRP) structure that enhances safety with anti-slip surface options, in-built water management, integral lines, integral lighting, snow melting capability and that has similar or lower overall project costs than concrete. This innovation is protected by a family of patents and is being adopted across the rail network. The company wins the Queen’s Award for Enterprise in the Innovation category.
Global Graphics Software Ltd

Global Graphics Software Ltd is an SME based in Cambridgeshire that provides software for printing and digital communication. High speed commercial inkjet printers suffer from recurring quality issues such as streaking and mottling (known as artefacts) and there was no available solution to these problems. In response the company developed ScreenPro™, a software engine that corrects these artefact imperfections by applying a halftone or multi-level screen to the inkjet printing workflow. It is unique in being a generally available, non-proprietary solution that can be applied to any manufacturers’ inkjet press. It smooths out artefacts irrespective of other software choices that may have been made and is effective with all the major inkjet printheads and combinations of electronics. It works at any device resolution and with any ink technology. The company sells to digital press manufacturers enabling them to bring products to market quicker by overcoming their technical challenges. The company wins the Queen’s Award for Enterprise in the Innovation category.

Maths Circle Ltd

Maths Circle Ltd is a small company of 7 employees based in Bedford who developed “Times Tables Rock Stars” a gamified app solution to engage children with learning of times tables and increase their confidence and proficiency in maths. The development resulted from a need identified by the company’s founder, a maths teacher, who saw many pupils entering the school lacked basic skills in maths. It began as a paper based training aid and was then developed into a software app with gamification features. The system uses artificial intelligence to tailor the questioning and learning to the child, adapting to their progress and building confidence. Additional features have been developed for those with special educational needs. Competitive events are run across the UK where schools send their fastest students to compete for the title of “fastest of the fast”. The company wins the Queen’s Award for Enterprise in the Innovation category.

East Innovation
Optical Metrology Services Ltd

Unit 9, M11 Business Link  
Parsonage Lane  
Stansted  
Essex  
CM24 8GF

Website: www.omsmeasure.com  
Employees: 21  
Immediate Parent: N/A

Press Contact: Mr James Sale  
Tel: 01279656038  
Email: james.sale@omsmeasure.com

Optical Metrology Services Ltd (OMS) is an Essex based company providing solutions to the global Energy sector. OMS have previously won a Queen's Award for Innovation in 2007 and 2014. Developed to address a gap in the market, their innovation is a pipe inspection technology and service. The technology is a combination of 3D laser scanning and high definition camera imaging. This tool saves their customers time and money by early detection of problems before they become expensive and disruptive to fix. The technology can operate in pipes as small as 50 mm in internal diameter and takes less than 30 seconds to perform a scan. Problems are detected early saving significant sums of money and preventing environmentally damaging leaks. The company wins the Queen’s Award for Enterprise in the Innovation category.

Photocentric Ltd

Cambridge House  
Oxney Road  
Peterborough  
Cambridge  
PE1 5YW

Website: www.photocentricgroup.com  
Employees: 93  
Immediate Parent: N/A  
Managing Director: Mr Paul Holt  
Press Contact: Ms Roxanne Ellison  
Tel: 01733349937  
Email: roxanne.ellison@photocentric.co.uk

Peterborough based Photocentric Limited has 18 years' expertise in resins and their interaction with light. These photo-polymeres are used for amongst other things, 3D printing and flexographic printing. The company holds two previous Queen's Awards for International Trade (2018) and Innovation (2016). 3D printing can be slow, expensive and struggles to create large items. By combining two innovative developments, a visible-light curing resin and the use of liquid crystal display screens as a light source, the company is able to make printers with higher resolution screens and has the largest format available. These printers deliver lower purchase and running costs to customers and have won the company international recognition. Elements of the technology are protected by a portfolio of 8 granted and 3 applied for patents. The company is now doing world leading research and has strengthened all aspects of its operation including bringing manufacturing of printers in-house. The company wins the Queen’s Award for Enterprise in the Innovation category.
SciBite Limited
SciBite, BioData Innovation Centre
Wellcome Genome Campus
Hinxton
Cambridgeshire
CB10 1DR

SciBite Limited is a software company based in Cambridgeshire formed in 2014. The company offers an ontology-led approach to transforming unstructured content into machine-readable clean data. Supporting the top 20 pharma with use cases across life sciences, from comprehensive competitive intelligence monitoring in real time to unlocking the value of your bioassay data or the full potential of ELN data. SciBite empowers customers with a suite of fast, flexible, deployable API technologies, making it a critical component in scientific data-led strategies. SciBite’s suite of semantic technology is the culmination of the perfect storm of tens of years of experience in unlocking the potential of scientific data to answer business critical questions. Headquartered in the UK, SciBite supports its global customer base through additional sites in the US and Japan. The company wins the Queen’s Award for Enterprise in the Innovation category.

Sphere Fluidics Limited
The McClintock Building, Suite 7
Granta Park
Great Abington, Cambridge
Cambs
CB21 6GP

Website: http://www.spherefluidics.com
Employees: 25
Immediate Parent: N/A
CEO: Dr Frank Craig
Press Contact: Dr Frank Craig
Tel: 01223628898
Email: Frank.Craig@spherefluidics.com

Sphere Fluidics Limited are a Cambridge business established in 2010. They have developed Cyto-Mine, a high-throughput, single cell screening system that can rapidly find rare bio-pharmaceuticals. This technology innovation is protected by a large portfolio of 97 granted and pending patents. Traditional methods and targets for drug discovery are becoming exhausted whilst the pharmaceutical industry is pressured to reduce costs and time to market. Cyto-Mine® offers novel and advanced features compared to existing technology by exploiting picodroplet and microfluidic technology. It is an extremely high-throughput (automatically tests tens of millions of cells within hours, compared to current techniques of 1,000 to 10,000 tests per three-week period). It condenses multiple laboratory stages and equipment into one single, compact, accelerated, simplified system. It is cost-effective in capital outlay and ongoing consumables, and the innovation also incorporates Artificial Intelligence. Cyto-Mine® accelerates biopharmaceutical discovery delivering both customer and societal benefits. The company wins the Queen’s Award for Enterprise in the Innovation category.
Adder Technology Limited is based in Cambridge and started trading in 1984. They design, manufacture and market a range of innovative technology generically known as KVM (Keyboard, Video and Mouse) which enables a user to control multiple computers with a single shared keyboard, monitor and mouse. This technology is used in applications as diverse as radio studios, submarines, airport control rooms, the Chinese State Power Grid and luxury yachts. In 2016 they set the vision of “20:20” for 2020, to achieve 20% growth in sales and reach 20% of sales for new products each year. The company has demonstrated strong year on year growth in overseas sales rising by 69% overall, with the United States the major market. The company has no external investment, growing organically with profits reinvested into R&D for new products. The company wins the Queen's Award for International Trade for Outstanding Short Term Growth in Overseas sales over the last three years.

Ant Group Limited T/A Antistat

The Ant Group, based in Bury St Edmunds, is a specialist supplier of electrostatic discharge and cleanroom consumables to the electronics, pharma, biotech, defence and automotive sectors. It also provides global service, supply chain management and procurement outsourcing to manufacturing companies. The company recognised in 2014 that it would not achieve its growth targets without growing its overseas revenues and established a sound strategy for growth targeting Europe and the USA. It sells both through distributors and its own office. Substantial overseas growth has been achieved and is anticipated to expand even further, especially in the USA. The Ant Group wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.
Brogan Group Holdings

4 Falcon Gate, Falcon Way

Email: media@camhcr.com

Established in Cambridge in 2013, Cambridge Healthcare Research Ltd is a UK-based consulting firm working in the life sciences and healthcare sector, specialising in product strategy and commercialisation, competitor analysis, and market insight. The firm's main clients are global pharmaceutical, medical device and biotechnology companies, as well as non-governmental organizations, such as the World Health Organisation (WHO) and United Nations International Children's Emergency Fund (UNICEF). Its target markets align closely with global pharmaceutical markets; USA, Europe and Japan being the key areas. The USA is a notoriously tough market and rapid penetration has been a significant achievement in the last three years. More recently there has been strong growth coming from Switzerland, Italy and Ireland. Over the last three years overseas sales have grown by 153%, with the percentage exported remaining at above 90% throughout. The company wins the Queen's Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Direct Meats (Knights Farm)

Direct Meats (Knights Farm) Ltd
Swan Street Chappel
Colchester
Essex
CO6 2EE

Website: www.directmeats.co.uk
Employees: 129
Immediate Parent: Direct Holdings Ltd
Managing Director: Mr Martin Blackwell
Press Contact: Mrs Kate Woodford
Tel: 01787 223364
Email: kate.woodford@directmeats.co.uk

Direct Meats (Knights Farm) Ltd was founded in May 1995 when third generation local farmer Martin Blackwell saw a gap in the market to provide a professional, bespoke service selling meat to restaurants, hotels and eateries. It is based at Knights Farm, Chappel, near Colchester. It is now a well-established food business selling into food service, wholesale, retail, export and catering markets. With its purpose built factories it is involved in butchery, charcuterie, curing, cooking and sausage manufacturing. Annual turnover now exceeds £18.5 million and overseas sales have grown by 170% in the last three years. The company employs 129 people. Its main export markets are Hong Kong, Singapore, the Channel Islands, Finland and Dubai. The company wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.
Innovative Trials Ltd

Stainless Metalcraft Ltd of Cambridgeshire manufactures products for the nuclear, medtech, energy, marine and scientific sectors and has been training apprentices for more than 100 years. Aware of the need to put in place a succession plan for what was a rapidly ageing workforce and increase diversity within the workforce, the Company established a training school in 2010. It also put in financial support for graduate apprentices progressing into a degree, and a programme that includes, ‘females in engineering’ site visits, People Like Me workshops (WISE) and support for local schools. A unique element of this apprenticeship programme is the use of the apprentices themselves to support the programme, thereby helping build their skills as they learn. Since 2013, staff retention rates have increased from 50% to 80% and over the last four years, all apprentices have been offered full time employment with the Company. The average age of the staff which was 54 is now 44. The company wins the Queen’s Award for Enterprise in the Promoting Opportunity through social mobility category.

Stockvale Investments Limited is a family run amusement and theme parks business including restaurants and catering outlets across the seafront. There are 481 staff, rising to 1000 in the height of the summer, many of whom are school leavers. The Company is underpinned by its ‘transformational programme’ starting with a recruitment programme guaranteeing every applicant an interview based on personality rather than educational achievement. They believe they are able to “find a job for anyone”. For all staff the ‘Stars League’ is a financially incentivised coaching and mentoring programme based on a daily score-based system rewarding staff with awards, cash bonuses and opportunities for promotion. Underperforming staff are offered coaching and mentoring. The programme also includes 15 leadership courses designed to change mind-sets and unlock opportunities. To support physical and emotional well-being there are 24/7 support services including physiotherapy and counselling. Demonstrating the success of this approach, all the current senior team have worked through the programme. The company wins the Queen’s Award for Enterprise in the Promoting Opportunity through social mobility category.

Adnams plc is a medium-sized regional brewer founded in 1872 in Southwold, Suffolk. It employs almost 600 staff, and demonstrates exemplary and innovative performance, leading the industry in many sustainable development areas. It supplies everything from small independent cafes to multi-national supermarkets and large pub chains, operates 13 shops, nine managed inns and a tenanted estate of 38 pubs. In 2005 and 2012 Adnams was awarded the Queen's Award for Enterprise in Sustainable Development and it has won many other awards. It has an excellent track record of positive impacts ranging from beach clean-ups, to an environmentally-friendly distribution depot. It spreads the message to the wider brewing industry and shows a clear commitment to continued learning and development to deliver strategic aims. The company is awarded the Queen's Award for Enterprise in Sustainable Development because it has demonstrated a major and sustained commitment to all parts of sustainable development including close involvement in the local community.

Email: pressoffice@anglianwater.co.uk

Anglian Water Services Ltd, established in 1989, supplies water and water recycling services to more than six million customers in the East of England and Hartlepool. It is headquartered in Huntingdon, Cambridgeshire and employs 4764 people. It was previously awarded the Queen's Award for Enterprise in Sustainable Development in 2015. It has demonstrated clear sustainability leadership, adopting an exemplary approach in formalising its commitment through amendments to its Articles of Association, the first utility company to do so. Its sustainable business plan, Love Every Drop, was developed through wide-ranging engagement with customers under three main areas: Smart Environment; Smart Communities; and, Smart Business, against the backdrop of the challenges of climate change and population growth. It is awarded the Queen's Award for Enterprise in Sustainable Development because it has demonstrated excellent positive impacts across a number of initiatives such as reducing carbon and improving water quality, through innovation, collaboration and education.
English Tea Shop

English Tea Shop was launched in 2010 to alleviate poverty in the tea industry. It employs nine people in the UK in Wickford and over 400 worldwide. It works directly with organic farmers, guaranteeing a fair deal, investment in training, equipment, quality and certification fees to secure long-lasting partnerships. As well as tea from Sri Lanka it buys various herbs, fruits and flowers from 20 other countries, supporting numerous organic small farming associations and families. Its commercial performance is impressive. Revenues have grown rapidly to £20 million (about half exported) and the range of organic and premium-quality teas and tisanes are sold in over 50 countries. This is an excellent small company that is really making a difference - committed to organic and fair trade practices. The company is awarded the Queen's Award for Enterprise in Sustainable Development because it can demonstrate strong leadership with a sustainable development ethos running throughout the company and an emphasis on partnership.
Commify UK Limited trading as Esendex

Commify UK Limited trading as Esendex is a medium sized SME based in Nottingham. The company has developed an effective mechanism for collecting small value debt economically while treating customers fairly. For clients such as utilities companies who may have thousands of customers, unpaid small balance debt is a huge problem, and is often written off. The highly intuitive mobile payment solution builds trust with customers and increases the likelihood that a payment will be made. From a text or email, customers can make full payments, or create a payment plan in 5 clicks, entirely on their mobile device. The software ensures that each customer is placed on an individual recovery path that has the most likely chance of a successful outcome. The cost of implementation for clients is at least 70% lower than traditional methods and shows a 5 times improvement in payments received. The company wins the Queen’s Award for Enterprise in the Innovation category.

Embroidery Design Solutions Ltd

Embroidery Design Solutions Ltd, based in Nottingham is an SME with 11 employees. The company identified that within the highly competitive embroidery industry digital design advanced at a faster pace than that of the machinery manufacturers. They therefore developed their own software and hardware solutions in order to develop and optimise embroidery techniques, applications and scale to a level beyond the reach of its competitors. Thinking beyond the traditional garment market, the company spotted the potential for stitching alternative, non-standard fabrics and threads, providing specialist applications over a larger size area. They now have the ability to work with specialist materials and non-standard consumables and adapt, develop and modify software and machinery to produce unique and innovative products. Their expertise has even extended to the medical field for which they have developed reliable technical weaves, using silk suture yarns, for creating surgical implants. The company wins the Queen’s Award for Enterprise in the Innovation category.

Email: julie@eec-ltd.com

Essential Equipment Consortium Ltd trading as EEC Performance Systems is a small company based in Leicestershire that has been trading since 1994. The company originally operated in the sales and servicing of weighing equipment in the food industry. Recognising they were in a declining market they took the step of utilising their skills and experience in a new sector. They identified that in top level motorsport (such as Formula 1), accurate refuelling is critical and mistakes can be costly in terms of safety, time and money. Fuelling race cars is usually based on weight but some of the fuelling systems available at the time had major fundamental design flaws. The f-POD intelligent race fuel bowser (fuel delivery system) ensures fuel is put into and taken out of a race car safely and accurately. It includes novel technical aspects including geographical gravity adjustments, empty hose adjustment, and wireless data connection to live team systems. Organisation details: Including our apprentice, there are now 3 staff in total. The company wins the Queen’s Award for Enterprise in the Innovation category.

W. Ball & Son Limited (Baltex) is the world’s oldest existing warp-knitting company, starting trading in 1831 and is based in Ilkeston, Derbyshire. The company designs, manufactures and supplies high performing technical textiles for aerospace, military, medical, composites and automotive. It sells into European Union, United States and Far East, with a main market of France and a large increase in automotive sales in Romania. Baltex plans to continue growth in the new markets of Germany and Central Europe, with manufacturing and research facilities in UK and Eastern Europe, offices in Hong Kong, Finland and Italy and a warehouse in Poland. Overseas sales have grown by 56% over the three year application period and the proportion of sales exported has increased to 67% of total sales. The company wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.
Established in 2011 and based in Nottingham, XenoGesis Ltd is a laboratory based contract research organisation specialising in the niche area of pre-clinical drug metabolism and pharmacokinetics, quantitative bioanalysis, in vitro pharmacology and modelling & simulation for human PK and dose prediction of new medicines. Overseas sales have increased over three years from £584.8k to £1.2m, a total rise of 120%, and now account for 51.4% of total sales. The company has built a reputation internationally for scientific excellence and now has a base of 170 international clients across Europe, Asia, USA, South Africa and Australia. Its top five markets are Denmark, Ireland, France, Poland and USA. It is now the largest independent provider in its field in the UK and is recognised internationally for scientific excellence, advice and delivery of services. The company wins the Queen's Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.
Northampton based Goodwill Solutions CIC provides logistics and storage services. The Company was founded to be commercially profitable and a social enterprise dedicated to using its operations and profits to help disadvantaged groups. Working across multiple partnerships and often taking a lead (strategically and financially), activities include the lottery funded Building Better Opportunities Wrap project (for unemployed and long-term unemployed), in-house four week placements through which participants can gain fork lift and other logistics qualifications, staff and resource support for a rough sleepers centre, and staff, training and financial support for a local community centre. The majority (60%) of its employees are ex-participants from the programme and Goodwill Solutions CIC never asks for a criminal record history on applications. The Company also works in close collaboration with the police and offers free space (worth £30k) at their warehouse to help the police offer intervention programmes. Independent external evaluations praise the impact achieved. The company wins the Queen’s Award for Enterprise in the Promoting Opportunity through social mobility category.
Blue Skies Holdings Limited, was established in 1997 and is based near Northampton with production in seven countries in Africa, South America and the UK. It employs 4,000+ people, 205 based in the UK. It was awarded the Queen's Award for Enterprise in Sustainability in 2011 and 2015. It produces fresh-cut fruits, freshly squeezed juices and dairy-free ice-creams aiming to ‘Add Value at Source’, by making the product where the fruit is grown. By processing products locally it aims to return value to communities, through employment with fair wages, skills development and technology. It has clear senior level commitment and leadership and a systematic approach to sustainability. It reduces environmental impacts through certification of its farms, the design and operation of its factories to reduce water and electricity consumption and by addressing impacts from plastic packaging. The company is awarded the Queen’s Award for Enterprise in Sustainable Development because it actively promotes human rights and good environmental stewardship.

David Nieper Ltd

David Nieper Ltd is a family business established in 1961, and based in Alfreton, Derbyshire. The company designs and makes premium quality British clothing for women over 50. It employs 291 skilled staff in five factories in the UK and has three overseas offices. The company designs clothes using materials which are all sustainably sourced from reputable suppliers and manufactures all garments in Britain. The company has three core aims: to regenerate the fashion manufacturing industry in the UK; to restore the standard of state education within the local community; and, to reduce the impact of garment production on the environment. It works with research bodies to inform its approach, and has shown good engagement with staff and wider community. The company is awarded the Queen’s Award for Enterprise in Sustainable Development because it can demonstrate strong leadership in sustainability with excellent results promoting local economic regeneration and reducing environmental impacts.

Email: julie@button-fix.com

Buttonfix Limited is a London-based company, established in 2007 to devise and commercialise construction products. The patented Button-fix panel connector was launched in 2012. The invention, designed for securely and invisibly mounting wall and ceiling panels, signage and other components, is made in the UK and sells around the world to both trade and DIY users. It has delivered continuous growth for the business since its launch and the company has expanded the range with new product launches almost every year. The Button-fix concept is simple: robust Buttons are attached to one surface and mating Fixes are attached to the other. Bring them together until the Button-fixes ‘click’. Special Marker accessories precisely and easily align the installation - no need for a tape measure or guesswork. Simplicity of use places Button-fix well ahead of the competition. The company wins the Queen’s Award for Enterprise in the Innovation category.

ClearScore Technology trading as ClearScore

ClearScore is a medium sized SME with over 200 employees based in London and Mumbai and across South Africa and Australia. Launched in 2015 the company is the UK’s leading credit-checking marketplace. By making credit scoring free to the customer ClearScore disrupted the marketplace and shifted the financial burden of credit checking away from the consumer. Customers receive a free credit score forever and are provided access to a variety of financial products and services from ClearScore partners with an indication of likelihood of being accepted. The system allows information to be presented in a way that is clear and easy to understand and is complemented by easy-to-read articles on a range of financial subjects and coaching tools for users to build their understanding of managing finance, all of which enables the customer to make a more informed decision when applying for credit. The company wins the Queen’s Award for Enterprise in the Innovation category.

Email: marc@codex.online

Codex Digital Limited is an SME based in London that was first started in 2006. The company has developed the Codex Recording Platform, a high performance camera RAW capture solution, which has become the global industry standard for uncompressed recording of media for film, commercials, and television production. When digital began to take over from film, storage of images was via large memory units external to the camera. This caused a restriction on camera mobility. An efficient in camera file based workflow system was required. The company partnered with the ARRI Alexa camera family, which are the most widely used for feature film production, and developed a miniaturised embedded technology. The system includes deep integration of camera metadata giving users all the necessary back-end data management tools to safely archive and distribute production material, which now delivers benefits over traditional cinematography workflows. The company wins the Queen’s Award for Enterprise in the Innovation category.

Tel: 020 8441 0352
Email: robert@hib.co.uk

London-based HiB Ltd is a major supplier to UK and overseas bathroom retailers. The company has developed interactive bathroom mirrors with integrated colour temperature changing technology. The lit perimeter of the mirror is activated by the user moving their hand along the side to change the ambient temperature of the LED lights, which change smoothly from a bright cool blue-tone to a soft, warmer yellow hue with every light temperature in between. When the user stops their hand in one place for a few seconds, the mirror remembers their preferred light setting. To house the lighting, a smooth, translucent acrylic edge was created which would allow light to flow all the way around mirror, removing shadows on the user’s face. In developing the product the company overcame several technical challenges and have shown further innovation by adding an anti steam function and other interactive elements. The company wins the Queen’s Award for Enterprise in the Innovation category.

MJF Osteopathy Ltd. trading as The Mayfair Clinic

MJF Osteopathy Ltd. trading as The Mayfair Clinic has developed an innovative approach to delivering services to patients suffering from back pain. The cost of services is detailed openly on the website including Initial consultations which are a fixed price and inclusive of any treatment required. Diagnosis is personalised and can include standing X-ray examination. The aim of the consultation is to identify the root cause of any problem. The personalised treatment package is designed to address the root causes identified. In addition to the initial consultation and treatment packages, patients are provided with a mobile app to coach them through their rehabilitation. The app is set to remind patients when to carry out exercises, tells them what exercises they should be doing, and gives video guidance as to how to perform them. The app also helps the clinician monitor patient compliance with the exercise regime. The company wins the Queen’s Award for Enterprise in the Innovation category.

Ninth Wave Ltd is a London based software company whose innovation is SmartCore V4, a cloud based application generator for project management and other business applications. The problem this innovative software solves is meeting the needs of customers for project and business management solutions that are sufficiently tailored to the needs of their organisation, but which does not require months or years of customised software development and dedicated support. SmartCore V4’s metadata described engine allows the same core system to be quickly configured to the specific requirements of different customers. The system is flexibly implemented, provides rapid integration with the customer’s own legacy systems and includes built-in interfaces to email and office applications. The company has gained high profile customers in competition with large international firms. The company wins the Queen’s Award for Enterprise in the Innovation category.

Q-Bot Limited

Block G,
Riverside Business Center,
Bendon Valley
London
SW18 4UQ

Employees: 29
Immediate Parent: N/A
CEO: Mr Mathew Holloway
Press Contact: Miss Audrey Massy
Tel: 07 795 530 130
Email: audrey.massy@q-bot.co

Q-Bot was founded in 2012 to develop and commercialise a robotic device that could insulate suspended timber floors. The problem of heat loss through suspended floors has been known for many years and on average accounts for around a 1/5th of the total heat loss for a home. Traditional methods of insulating the floor are expensive and difficult to implement, so most suspended floors remain un-insulated. To solve this challenge Q-Bot has developed and patented a robot that can fit into the void beneath a suspended floor, carry out a 3D scan, survey the area, and spray insulation onto the underside of the floorboards. This keeps heat in the property and draughts out. The result is a significant reduction in energy use and CO2e emissions, while saving households money and making their homes much more comfortable to live in. The company wins the Queen’s Award for Enterprise in the Innovation category.
Switchee is a London based business formed in 2015 to develop and market a novel smart home solution for residential landlords. Large landlords with thousands of properties face a triad of related issues: 1) Housing stock having to reach Government's carbon targets 2) Fuel poverty of tenants 3) Efficient and cost-effective management of properties heating maintenance. The Switchee smart thermostat for affordable housing is a smart home solution for residential landlords to manage their property portfolio efficiently and compliantly. It is both a product, a 'fit and forget' thermostat installed in tenants homes, and a service. The thermostat is GSM connected and needs no input from tenants as it learns occupancy patterns and adjusts accordingly ensuring efficient heating. The service is a digital dashboard allowing landlords to centrally monitor many aspects of their properties' status and efficiently manage scheduled maintenance and repairs. The company wins the Queen’s Award for Enterprise in the Innovation category.

Avenue 51 Ltd is based in Anchor Wharf in London’s Docklands and was founded in October 2014. The company identified market opportunities and built key technologies to allow it to place UK companies’ products on Chinese marketplaces; to receive the orders from those marketplaces; and to facilitate an automated Chinese customs clearance process. Over the last 3 years overseas sales have grown by 43%. Since 2017, the company has sold its technology and services to the French and Nordic markets, which now account for 7% of overseas revenues. The company employs 21 people, many with language skills, and each year is a key partner for the Best of British shopping exhibition in Shanghai when it features the finest in British consumables for an audience of high-end consumers from across China. The company wins the Queen's Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.
Brompton Technology Limited

Brompton Technology Limited is based in London and started trading in 2012. They develop, manufacture and sell high quality, ultra-reliable LED video processing products that meet the needs of professionals working in the pressurised world of live events, concerts and broadcast. LED video displays are made up of many individual LED panels fastened together to create one large screen. Their video processor receives a video signal, formats it for the screen by dividing and synchronising the image appropriately for display on each individual panel. Their strategy has always been international, with a sound approach to investment and product development and they have demonstrated very strong overseas earnings growth rising by 115% overall in the three year period with the United States and China the significant markets. The company wins the Queen's Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Charcoalblue LLP

Charcoalblue was founded in 2004, becoming an LLP in 2012 as a Theatre Design business. Over the years, they have invested in the development of their specialist teams in Acoustical and Digital Design adding to their core services. Their portfolio includes London's National Theatre; in the US Chicago Shakespeare Theatre; Canada, Toronto Luminato Festival; Australia the Sydney Theatre Company; and the Waikato Regional Theatre, Hamilton, in New Zealand. In the last six years they have entered the USA, Canada, Australia, New Zealand, Singapore, Kuala Lumpur, France, Belgium, Sweden, Poland, South Africa, Qatar and Kazakhstan and are exploring opportunities in Spain, Italy, Denmark, Ireland, Sweden and Saudi Arabia. Across the last six years overseas sales have grown by 1,1017% with the percentage exported increasing from 32% to 67%. They also take an exceptional approach to CSR policy delivered by their own 'Blue Team'. The company wins the Queen's Award for International Trade for Outstanding Continuous Growth in overseas sales over the last six years.

Established in 2014, Cru Wine Limited is a London based company specialised in the field of fine wine investment and management services; and the trade to international private clients and importers. Today, they manage circa £3m of fine wine on behalf of over 150 clients across more than 25 countries worldwide. In 2019 they opened their office in Hong Kong to meet the increasing demand in Asia for fine wine: and recently added a partner in Geneva, opening an office to cope with the increase in clients from Switzerland. The top five countries they export to are: Hong Kong, Switzerland, the US, UAE, and France; with the Middle East and US as their two most important markets. Over the last three years overseas sales have grown by 476% with the percentage exported rising from 51% to 77%. The company wins the Queen's Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Established in 2016, Global Leadership Associates have created a radically different approach to leadership development and organisational transformation. Central to their work is their proprietary psychometric tool, the Global Leadership Profile, which measures the stage of development of a leader’s mindset. This so called ‘Vertical’ approach of growing the complexity of how a leader thinks, is fundamentally different to most approaches and tools which focus on growing skills and knowledge at the same level of thinking (horizontal development). Over 90% of their work comes from major clients who include Mars Incorporated, Walmart, McKinsey, Deloitte, Lyft, Novartis, The Bill & Melinda Gates Foundation and U.S. Government Department NIH. Headquartered in the UK, they have associates in over 20 countries. In the last three years, global sales have grown by over 600% with their top markets being the United States, Australia, China, Russia and Spain. The company wins the Queen’s award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Kaymet London Limited started trading in 2013 in London, although originally established in 1947. The company focuses on production of a small range of classic high quality anodised aluminium trays, trolleys and electric table hot-plates, most with designs from the 1940s, 50s and 60s, and selling to retailers, hotels, event venues, cafes and restaurants. Germany, France, USA, South Korea and Switzerland, account for an estimated 60% of export sales and it now exports to 40 countries, with products stocked by more than 140 overseas re-sellers. Plans are to continue growth through further stockists in an increased number of countries. Overseas sales have grown by 112% over the three year application period and the proportion of sales exported was 67% of total sales in the final year of application. The company wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Learning Resource Network Ltd (LRN) is an Ofqual regulated Awarding Organisation that was established in 2011. The intention was to provide a range of qualifications for UK and Overseas centres, students and employers. LRN's qualification portfolio ranges from Entry Level provision through to Level 7 across a range of subjects such as education, teaching, business management, creative industries and English for Speakers of Other Languages (ESOL). LRN provides accreditation services for both regulated and unregulated provision which meets the needs of a number of stakeholders, which includes training providers and employers. LRN has expanded its network at the rate of five new centres per quarter. In doing so, this has enabled the company to increase its overseas sales by almost 300% in three years. LRN wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

London Tradition is a leading British outerwear manufacturer and brand based in Hackney Wick, East London. Founded in 2002 by Mamun Chowdhury and Rob Huson, their aim is to produce exceptional quality outerwear of British origin only. London Tradition creates high-quality garments with an emphasis on the tradition of British tailoring, taking heritage styles into the 21st century. The brand represents British craftsmanship to a global audience with 85% of its sales heading to export markets, including Japan, China, Russia, South Korea, France, Germany, Chile, and the rest of Europe. London Tradition achieves this with its cumulative experience over many years of experience in the industry, close relationships with its suppliers, and being able to maintain quality and control of their production at every step. The company provides bespoke personalised services for brands and individuals globally. Having previously won in 2014, they have continued their year on year growth, recognised with the Queen’s Award for International Trade in 2020.

Howad Ltd trading as incognito was founded in 2007 and employs 10 people. It manufactures what could become the world’s leading natural insect repellent from its premises in Ladbroke Grove, London, competing directly with multinational pharmaceutical companies. It was awarded the Queen's Award for Enterprise in Sustainable Development in 2015. Since then it has continued to evolve and grow, looking at ways to improve its offer e.g. reducing single-use plastics by switching to sugarcane plastic in 2017, which is from an organic and renewable source and is fully recyclable. It is also looking at offering a refilling service, increasing to 100% natural products, while sticking to its core aim of offering a natural insect repellent with minimal environmental impact. The company is awarded the Queen's Award for Enterprise in Sustainable Development because it can demonstrate an impressive level of sustainable leadership and practice throughout the organisation, delivering positive environmental impacts through constant innovation.

Impax Asset Management Group plc

Impax Asset Management Group PLC was established in 1998 and is based in London employing 176 people. Impax was awarded the Queen's Award for Enterprise in Sustainability in 2014. Impax seeks to invest in companies and real assets that are leading the transition to a more sustainable economy and, for more than 20 years, has pioneered investment into companies that are spearheading sustainable development. Its sustainability strategy looks both at its investment practice and its own operations. Impax supports companies in improving their Environmental, Social and Governance performance, provides support to environmental charities and works with universities. Its participation in policy and sustainable investment tool development has advanced the practice of assessing the sustainability of investments and it has catalysed very significant levels of investment in sustainable business such as renewable energy. The company is awarded the Queen's Award for Enterprise in Sustainable Development because it demonstrates strong leadership in the sustainable finance sector.
Absolute Antibody Limited

Absolute Antibody Limited was established in 2012, and is based in Redcar, although the business was founded in Oxford to serve scientists involved in medical research. The company offers antibody sequencing, engineering and recombinant production as a service and a catalogue of recombinant antibodies, engineered into new formats. USA was identified as the biggest market and the company acquired Kerafast Inc in 2018 to focus on this market. It has built a network of 30 distributors worldwide to serve customers in 62 different countries. These include 14 of the top 15 pharmaceutical companies by revenue as well as academic researchers. Overseas sales have grown by 100% over the three year application period and the proportion of sales exported has increased to 81% of total sales. The company wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Crafter's Companion

Founded in 2006 in County Durham, Crafter's Companion is a craft retailer selling globally. Traditionally it designed, manufactured and sold products for the papercraft market including machines for use with metal dies, paper, card stock and stamps, and enveloper machines. More recently it has expanded its portfolio to include fabrics and sewing tools, bobbins and sewing kits, sewing machines and multi media dyes. It has also developed its own line of art materials. Over six years overseas sales have increased substantially from £2.4 million to £20.3 million. A total increase of over 716% and overseas sales now account for 63.9% of total sales. The company sells in over 40 markets worldwide. Its key market is the USA which accounts for over 50% of overseas sales and its next top five markets are Germany, France, Netherlands, Australia, Ireland and Sweden. The company wins the Queen's Award for International Trade for Outstanding Continuous Growth in overseas sales over the last six years.

Prima Cheese Ltd started trading from a small industrial unit in Sedgefield in 1996, before moving to the Seaham, County Durham site in 2001. It is a family owned and run company specialising in the process of shredding and blending a variety of unique dairy products suitable to supply its domestic UK and international markets. The company specialises mainly in pizza cheese which is its core product. Over the six years to March 2019, the company's overseas sales have grown by £13.75 million from just under £3 million to £16.7 million; an overall growth of 464%; and now make up 25% of all sales. Its top export markets are Lebanon, Netherlands, France, Dominican Republic and the United Arab Emirates. The company wins the Queen’s Award for International Trade for Outstanding Continuous Growth in overseas sales over the last six years.

Established in 2009, and based in Houghton Le Spring in Tyne and Wear, The WorkCast Corporation Ltd creates online events and web based presentations, using streaming media technology to distribute a single content source to thousands of simultaneous viewers/listeners on behalf of clients. The company has worked with some of the world’s biggest organisations like the NHS and Sony on their webinars, webcasts and virtual events. Overseas sales have increased over three years from £223.2k to £585.3k; a growth of 162%. Overseas sales now account for 26.7% of total sales. The company’s main market is the USA and it has opened an office there to increase penetration. It sells to major institutions and companies internationally and over three million people a year now attend webinars it produces. Its top five markets are the USA, Canada, Switzerland, Italy and Ireland. The company wins the Queen's Award for International Trade for its Outstanding Short Term Growth in overseas sales over the last three years.

Shared Interest Society Ltd is a Mutual Society registered under the Co-operative and Community Benefits Societies Act 2014. It was established in 1990 and is based in Newcastle employing 34 people in the UK. It won the Queen's Award for Enterprise in Sustainable Development in 2013. It is an ethical investment organisation offering finance to producers worldwide, aiming to alleviate poverty by helping people in remote and disadvantaged communities to trade and earn a living. It acts co-operatively with more than 11,500 investors pooling £41 million of investments and using these funds to provide loans and credit facilities to primarily fair-trade businesses. It has worked to reduce its own environmental impacts and encourages staff to volunteer in local communities. It has exemplary reporting on social benefit including producing a Children’s Report. The company is awarded the Queen's Award for Enterprise in Sustainable Development because of its clear mission to support small business to grow and trade sustainably, supporting both farmers and artisans.

Manchester-based Atmos International Limited was established in 1995 and one of its core products, Atmos Wave, is an innovative leak and theft detection system with accompanying services for pipeline operators. Liquid pipelines that extend over many miles and across changing terrains are often difficult to monitor accurately for leaks and thefts. While leak detection systems based on rarefaction waves were developed in the 1970s, there had been little improvement until Atmos International brought this leak detection technology up to date. By combining the latest sensing and remote communication technologies with advanced data processing algorithms, they have delivered accurate, reliable services to pipeline operators in many countries around the world. This patented innovation delivers significant benefits to customers and the environment through accurate leak/theft location and loss prevention. A test conducted by the Pipeline Research Council International (PRCI) has shown Atmos Wave outperforms competitor systems significantly. The company wins the Queen’s Award for Enterprise in the Innovation category.

Combined Chemical Services is a small Cheshire based company that previously won a Queen's Award for International Trade in 2018. Their innovation is a combination of three products and a service aimed at maintaining effective operation of Biomass hot water boiler systems. Since 2009 there has been a significant increase in the installation of biomass boilers particularly because of their environmentally friendly aspects and the availability of relatively inexpensive fuel. These systems are susceptible to the problems of scale build up and corrosion leading to operational problems such as blockages and reduced water flow rates. The products developed for this market are the result of 45 years' experience of developing water treatment formulations and are unique for this market. Their expertise has also enabled the development of preventative and remedial maintenance services to biomass boiler operators creating new revenue streams for the company. The company wins the Queen’s Award for Enterprise in the Innovation category.

Contra Vision Ltd is a Cheshire-based SME that has won the Queen’s Award for Enterprise Innovation category in 2015 and International Trade in 2014. Their innovative product Contra Vision® HD™ is a high definition perforated window film for one-way vision and other see-through graphic applications. To deliver a perforated window film that outperformed competitor products the company reduced the hole diameter punched in the self-adhesive film assemblies from 1.6mm to 1.0mm. To achieve this, a new high precision machine capability needed to be developed. The resulting, patent-protected material delivers dramatic improvements in the quality of design visible from one side, a much less noticeable perforation pattern visible from the other side, and a disproportionately high improvement in the

Duo Plastics Ltd, trading as Duo UK, is a large SME operating in the field of plastic packaging manufacture. This Manchester based company has developed an innovative mailing bag with easy release handle that remains in position throughout postal system. The company recognised that existing click and collect mailing bags were increasing delivery costs and that the existing handle style reduced throughput. The DuoOptipac mailing bag provides e-commerce retailers with a parcel bag that features a convenient integrated carry handle which is stuck to the packaging during transit but released when needed by the customer. The bag improves throughput on a conveyor system and saves money on volume shipping pricing without compromising on the capacity of the bag or adding additional processes to the fulfilment operation. The patented design delivers benefits to customers and now represents 18% of total company sales. The company wins the Queen’s Award for Enterprise in the Innovation category.
Simply Doughnuts Ltd

Email: shiraz@simplydoughnuts.co.uk

Based in Blackburn and formed in 2012, Simply Doughnuts Ltd has developed a unique, long shelf-life doughnut. Ordinary cooked doughnuts have a short (2-day) shelf-life, which can lead to a considerable waste of unsold product. Doughnuts can be frozen but this is energy intensive and requires extra time and space for storage and thawing before sale. After 18 months of research and years of refinement, the company developed a production process that yields a fresh doughnut with a shelf life of up to 30 days. Protected by trade secret, the process is a precise combination of quality ingredients, mixing sequence, mixing method, temperatures, time and frying. Available in six variants, the product is now stocked by many major UK retailers and sits in both the fresh and long-life categories. It has driven significant growth in turnover and employee numbers. The company wins the Queen’s Award for Enterprise in the Innovation category.

Based in Whitworth, Lancashire, Slingco Ltd was founded in 1980, supplying products that make installation and support of industrial electrical conductor, cable and hose, easier and safer. Markets include energy, transmission and distribution, oil and gas, renewables and transport. The company won a Queen’s Award for International Trade in 2016. Key markets have oil and gas reserves, with USA the most important, although the company sells into 75 countries. American markets are handled by the USA sister company, with Europe and Middle East through the UK. The UK is the key manufacturing facility, with some manufacture overseas, directly or under license. Overseas sales have grown by 178% over the three year application period and the proportion of sales exported has increased to 86% of total sales. The company wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Standfast and Barracks started trading in 1923, and is based in Lancaster. It offers traditional rotary, flatbed and screen printing techniques, alongside digital ink jet technology and is now market leader in digital fabric printing, across both the interiors and fashion/apparel industries supplying textile converters in the largest global markets of USA and Europe. The company now sells to eight of the top ten US textile convertors and has targeted New Zealand, South Africa, Korea and Spain. Standfast and Barracks works with stocking distributors, bringing added value to customers by offering a wide selection of designs. Overseas sales have grown by 69% over the three year application period and the proportion of sales exported has increased to 20% of total sales. The company wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Manchester based Travel Counsellors Group operates a highly successful franchise-based travel company delivered by franchisees in the UK and seven countries in Europe, Africa and the Middle East. Its 1,900 franchise owners make travel arrangements for over 750,000 corporate and leisure travellers each year. These travel counsellors are supported by a nearly 400-strong global support team. Sales have grown substantially both at home and overseas, with export sales of more than £55m now representing more than 20% of its business. The company’s success is largely based on its in-house technology platform and high levels of support for its counsellors. A previous winner of the Queen’s Award for International Trade in 2014, the company wins the Queen’s Award for International Trade for Outstanding Continuous Growth in overseas sales over the last six years.

CELLS Project CIC founded in 2012 is based in Merseyside and works with children and young people from disadvantaged backgrounds to challenge perceptions of crime and offers proactive and reactive crime prevention interventions to reduce the risk of offending. The CELLS programme has five main programmes: an awareness and behaviour programme, a turnaround and inclusion programme, an outreach and street engagement programme, an intensive mentoring programme and an "itsup2u" initiative targeted at positive development and rehabilitation. It also runs innovative prison experiences to help people understand the realities of prison life. Volunteers from ex-offender and 'victim' backgrounds deliver the training, workshops and mentoring. It has helped to break the crime cycle, support rehabilitation and reintegration and simultaneously offers a regulative curative work experience for victims of crime. To date the programme has worked with 150,000 children and young people all from disadvantaged backgrounds and 356 'secondary' beneficiaries (including volunteers). The company wins the Queen’s Award for Enterprise in the Promoting Opportunity through social mobility category.

David Luke Ltd is a family business which started trading in 1982, supplying independent retailers with school specific uniform. The business operates from a distribution centre in Ardwick, Manchester with 55 staff. It produces an Eco-Uniform range which means it holds a strong position at the vanguard of its industry. The Eco-Uniform accounts for a substantial percentage of product sales and the product range is growing. Good positive impacts are demonstrated, working with the Eco Schools programme, local charities in Manchester, and supporting disadvantaged families to access uniforms. It has been committed to a price point that was no more expensive than the previous items. It is developing its work with the global supply chain and has a long-term commitment to ethical trading. The company is awarded the Queen’s Award for Enterprise in Sustainable Development because it has demonstrated a long-term commitment to sustainable improvements specifically through the development of an eco-product (school uniforms), using recycled plastic to create the polyester content.

The Quiet Site is a family run, year-round, medium-sized holiday park in the Lake District on a farm overlooking Ullswater established in 1963. It provides quiet, responsible holidays with the least possible environmental harm. In the last 15 years it has invested two million pounds in sustainable technologies as part of an overall sustainable development strategy. This has included water and waste recycling, solar PV and thermal panels, biomass heating, green purchasing, transport opportunities, and zero waste shopping. 15 underground holiday ‘Hobbit Holes’ are popular, highly insulated and extremely energy efficient. The approach has been recognised through a range of business and sustainability awards. The company has gone well beyond established practice, for instance eliminating single use plastic entirely from the business, including the shop which mainly supports local businesses. The company is awarded the Queen’s Award for Enterprise in Sustainable Development because they are providing sustainability leadership in their industry.

Northern Ireland Water Limited was established in 2007 as a Government Owned Company based in Belfast. It employs over 1,320 people and is the second largest landowner in Northern Ireland managing almost 22,000 acres of water catchment area and land, serving a population of almost two million. Its core activity is the delivery of water and wastewater services. It has won numerous awards for excellence. It is addressing key sustainability issues using innovative approaches. Its work involves employees and customers and its supply chain, using partnership working to deliver in an inclusive and innovative way. It is delivering large-scale investment to protect catchments, improve raw water quality, enhance biodiversity, reduce carbon emissions and flood risk, increase renewable energy generation and improve wastewater treatment. It has a wide-ranging programme to attract, recruit and retain a diverse workforce. The company is awarded the Queen’s Award for Enterprise in Sustainable Development because of its strong and wide-ranging sustainable development programmes and its clear senior commitment and leadership.
Armadilla Ltd

Midlothian company Armadilla Ltd, formed in 2010, are manufacturers of outdoor living spaces that have extended their range to include an innovative, five star quality, modular accommodation pod designed for the fast developing experiential economy. The Hotelier Pod is an accommodation unit which enables venues to increase and create bedroom space outdoors. It is built to be up and running within an hour and to have a lifespan of 50 years with minimum maintenance. An automation system called Pod Control has been developed that enables guests to control environmental features of their Pod from their mobile phones. The app integrates connection with the host establishment who can provide additional features, offers and booking facilities. This connectivity also enables remote diagnosis of problems by the manufacturer if required. The design features, integration of technology, and modern manufacturing approach sets the Hotelier Pod apart from its competition. The company wins the Queen’s Award for Enterprise in the Innovation category.

Gray & Adams Limited

Aberdeen-based Gray & Adams Limited is a family owned business that manufactures trailers, semi-trailers and refrigerated versions of both. They have demonstrated excellent innovation practice by introducing a double-deck trailer design with full-length moving upper deck. Existing double-deck trailers with a moving upper deck only span the rear two-thirds of the trailer. This is due to height restrictions created by the trailer hook up design. The company developed a bespoke chassis that slopes 1.5 degrees from front to rear, removing the need for a step in the chassis and making it possible to have a moving deck the full length of the trailer, leaving enough height inside the trailer at the front to have two load levels. The design maximises payload capabilities, reducing the number of vehicle journeys required and increasing operating companies efficiency. These, and other, designed in benefits have helped the trailer grow to 10% of total sales. The company wins the Queen’s Award for Enterprise in the Innovation category.
Quarch Technology Limited are an Aviemore based designer and manufacturer of test equipment for data storage manufacturers. The founder of the company, an experienced designer of data storage devices, identified that during the development of high-speed data interfaces a great deal of testing is needed to ensure that devices and cables can be removed and plugged in while the rest of the system is running. The Torridon Testing Suite allows a vast range of additional tests to be run with precise timing allowing rare fault cases to be found early in the design process. At the same time, a huge number of precise timing and fault injection tests can also be run. Many of these tests cannot be run by a technician, and would otherwise require one or more specialist engineers to design and run the test. The product saves customers time, enables faster speed to market, improves product quality, and reduces the cost of design. The company wins the Queen’s Award for Enterprise in the Innovation category.

SnapDragon Monitoring Ltd of Edinburgh is a software company that has developed an online brand protection solution for SMEs marketed as Swoop. Counterfeit goods sold online can harm the reputation and profits of businesses and can be unsafe for users. The current solutions include expensive, legally-based services and manual analysis and these can be too costly for an SME. Swoop surveys online marketplaces identifying counterfeit products leading to offending links being removed potentially in a matter of minutes. The company combines the use of machine learning and human intervention to reduce false positives and improve the accuracy of the algorithms which identify infringement through image recognition, price and seller analysis, and supply chain verification. The system has a 96% success rate with takedowns, protecting clients’ reputations and increasing sales by removing fake products from the market. The company wins the Queen’s Award for Enterprise in the Innovation category.

Enerquip Ltd. is registered in Scotland and based in Aberdeen. It commenced trading in June 2015 and specialises in the design and manufacture of bespoke torque equipment for make up and break out of tubular goods. With strategically placed service centres across the globe, the company caters for the highly demanding requirements of the oil and gas industry, whether through 24/7 support of existing fleets of equipment around the world, or the design and manufacture of new equipment to satisfy the latest changes in industry regulations. Overseas sales have grown to £6.7 million in the three years; an overall growth of 544% and make up 87% of all sales. Its main strategy is to continue to grow organically with the intention to open further sales & service offices in new regions. Its main markets are the USA, Middle East, Far East and Africa. The company wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales.

Email: terry.bartlett@auto Integrate.com

Formed in 2013, Auto Integrate Ltd is a Portsmouth based software development company and 2016 Queen’s Award winner for International Trade. Their product Auto Integrate is a revolutionary cloud based vehicle maintenance authorisation software system. Auto Integrate is designed specifically for the USA and Canadian vehicle fleet markets. It provides automated approval of maintenance work in seconds. The system provides an integrated maintenance management platform incorporating multiple functionality including automation of process and decision making, scheduling and compliance modules with data audit, Invoicing and payment. Whilst the system is not patented, its first to market position, and deep integration with fleet managers, national service centre chains, vehicle manufacturers, and their internal procurement and payments systems, make it very difficult for a competitor to enter the market. The platform now dominates the North American market with little competition evident. The company wins the Queen’s Award for Enterprise in the Innovation category.

Email: sally.whitson@ticketer.co.uk

Corvia Ltd trading as Ticketer is an SME based in Berkshire which has been operating since 2009. The company has designed and developed electronic ticket machines which work in conjunction with a cloud-based back office, that is operable by every bus operator irrespective of size. Previously bus ticketing systems were deemed to be inefficient and unwieldy. Corvia ticket machines operate over any mobile network delivering aggregated data to the operator within seconds, and enable over the air upgrades, configuration and fare changes to be deployed to thousands of ticketing machines rapidly. All machines are fitted with GPS, giving operators real-time visibility of the location of each vehicle and passengers can also access live information of the bus they are waiting for via the Kazoot app developed by the company. The addition of multiple payment options to this flexible solution has been disruptive within the industry. The company wins the Queen’s Award for Enterprise in the Innovation category.

Daniamant Ltd is an SME based in Portsmouth and is a previous winner of the Queens Award for Enterprise - Innovation in 2014. The company has developed the ODEO Distress Flare which is an innovative alternative to the pyrotechnic red hand flare. The product reduces the risk of possible burns or damage to a user or life raft. It uses LED technology to display a red flicker for distress whilst also displaying the internationally recognised SOS signal. It lasts for 9 hours instead of 60 seconds giving the survivor the best chances of being seen over a longer period and has built in infrared for search and rescue at night using night vision goggles. It saves on transport costs and has no environmental disposal issues that pyrotechnics have. ODEO was the first electronic flare in the market and is now influencing new legislation and regulations worldwide. The company wins the Queen’s Award for Enterprise in the Innovation category.

Frenchic Furniture Paint by Vintiquities Limited

Email: pam@frenchicpaint.co.uk

Frenchic Furniture Paint is a chalk and mineral paint manufacturer based in Surrey. Chalk paint delivers a finish that is increasingly popular, however, such paints carry the misconception that have inherent problems and are primarily used only by artisans and professionals. In response to this situation the company developed The Frenchic Lazy Range, which has all the distinctive characteristics of original chalk paints but with added wax infusion, creating a unique chalk and mineral paint with sealing properties. The Lazy Range is self-priming, self-levelling, and self-sealing. It is unlike any other chalk paint and the first of its kind in the decorative market. By removing the need for a sealing coat, customers save more than half the time and a third of the cost. The product range has secured the company distributors globally and driven strong growth. The company wins the Queen’s Award for Enterprise in the Innovation category.

Email: lauren.hudson@iceoxford.com

Ice Oxford Limited (trading as Iceoxford or ICE) was founded in 2004 to design and manufacture specialist ultra-low temperature equipment for the cryogenic research community. The founders believed it was possible to design and manufacture a more efficient cryogenic system that would be stable at lower temperatures to compete with the limited specifications of alternative products available on the market. So, they designed and created the 1.0 Kelvin High Cooling Power Cryogenic System to meet the needs of researchers working on the development of quantum photonic computers. Ultra-low temperatures are necessary in quantum computing to increase stability and the company achieved this through developing and combining multiple patented components. The result is a system which achieves temperatures of 0.3K (or 300mK), which is 1.4 Kelvin degrees below that of their nearest rival. The company wins the Queen’s Award for Enterprise in the Innovation category.

Kwikbolt

Kwikbolt Ltd, based in Eastleigh, specialises in the design and manufacture of single-sided temporary fasteners for the aerospace and defence industry. Modern aircraft manufacturers utilising composite materials require appropriate temporary fasteners, and existing solutions were based on technology developed in the 1940s and 1950s. In response, the company designed and patented the 3D metal printed Kwikbolt Lightning temporary fastener. The new temporary fastener has tight tolerance, is single sided, fully flush, lasts for over 500 cycles and delivers high clamp loads. The company has also developed and patented installation and removal technology to allow for their fasteners to be installed and removed via a robot when there is very little space or surface area to hold the fastener. This leading edge technology has resulted in the company receiving significant recognition in the sector globally. The company wins the Queen’s Award for Enterprise in the Innovation category. The company also wins the Queen’s Award for International Trade this year.

Having previously won Queen’s Awards for Innovation (2012) and International Trade (2016), Metricell Limited of Horsham, West Sussex, has this year achieved an Award for their innovative crowd-sourcing software Aptus. Mobile phone network providers work constantly to improve signal strength and reception across their networks. Aptus is lightweight code designed to integrate with any mobile application. It silently collects user experience and performance data that is uploaded to the Metricell cloud platform. This data is then aggregated to give mobile network providers key insights into network performance via visual and mapped outputs. By aggregating the performance data of networks as experienced by many individual devices it is possible to build a very clear picture of performance and demand. This enables providers to focus improvement activities. One client has used gamification to encourage users to walk around certain areas to win points whilst generating increased levels of insight into network performance. The company wins the Queen’s Award for Enterprise in the Innovation category.

**Nim’s Fruit Ltd t/a Nim’s Fruit Crisps**

Press Contact: Ms Nimisha Raja  
Tel: 01795424238  
Email: airdried@nimsfruitcrisps.com

Located in the ‘Garden of England’, Nim’s Fruit Ltd is the UK’s only manufacturer of air-dried fruit crisps. The company was established by entrepreneur Nimisha Raja, who wanted to marry fruit and crisps to create a healthy snack for children. This had not been done before, the only alternative being freeze dried apple crisps which are not crunchy. Nim’s are 100% natural, made in a state-of-the-art environment that is certified nut and gluten free and are the only crisps on the market to be recognised by Public Health England as ‘1 of your 5 a day’. All products are also vegan and kosher friendly. The company uses local grown fruit where possible and they buy fruit that is not of a standard to be sold as produce. This provides an alternative outlet for farmers to sell their “substandard” produce and significant benefit to the local economy. The company wins the Queen’s Award for Enterprise in the Innovation category.

Overview Ltd, formed in 1988 is based in Woking, Surrey. Their innovation is the development of a range of precision, intelligent, direct drive servo motors. The company began by supplying cameras and positioning equipment for CCTV, security and defence applications. Frustrated at the limitations of existing positioning systems and not being able to find suppliers of positioning motors with the characteristics they required the company realised there was a market gap and opportunity if they could develop a product to fill it. To find this solution they began working to develop their own capability and skills, collaborating with Newcastle University and receiving support from Innovate UK to progress the technology. The resulting “Servotorq” range of motors integrates the motor, drive electronics, position encoding and software in a single package and delivers a superior product. This innovation has transitioned the company to a technology leader in the design, development and

Rayner Intraocular Lenses Ltd of Worthing design and manufacture intraocular lenses; small artificial lenses that replace removed cataracts (a hardened natural lens). Incision size matters in cataract surgery because a large incision is at greater risk of infection and also large incisions often change the sphericity or curvature of the eye. The company’s innovative RayOne injector was designed to have the smallest nozzle diameter on the market at 1.65mm and therefore requires a small incision. In addition, the company has developed a method of ‘fully preloading’ the injector with the lens so that the nurse or surgeon does not have to touch the lens at all. This patent protected product and method is unique and delivers significant benefits to both surgeons by reducing surgery time and patients through improved outcomes. The product has been very successful and now delivers almost half of the company’s total turnover. The company wins the Queen’s Award for Enterprise in the Innovation category.
Rentokil Initial plc

Surrey based Rentokil Initial plc develops and manufactures a range of products and delivers services aimed at reducing threat to public hygiene, and damage to property, from rodents, insects and mosquitoes. Following four years of research and development the company launched Lumnia, the world’s first insect light trap to use Light Emitting Diode (LED) lighting rather than traditional fluorescent tubes. Entomologists have studied the optimal wavelength of ultraviolet light that flies detect and have tuned the spectral characteristics of the LED to match this wavelength. The move to LED light sources removes the significant risk of glass in food preparation areas and the burden of end of life fluorescent tube disposal. Lumnia was designed to deliver reduced running costs, improved performance, and ultimately improved food safety. Sales of Lumnia have grown rapidly demonstrating the success of this novel product design. The company wins the Queen’s Award for Enterprise in the Innovation category.

Solid State Logic UK Ltd of Oxford, trading as Solid State Logic, invents, designs and manufactures technology for the creative manipulation of sound. System T is an innovative modular professional audio broadcast system that enables audio engineers to concentrate on sound quality in the knowledge that the infrastructure they are using is fully integrated. The company uses off the shelf hardware combined with their own control technology and audio signal processing software. To ensure the professional standards required for any audio broadcast are achieved any system needs high reliability. The equipment has a redundant infrastructure. This added hugely to the complexity of developing the system as many failure modes had to be predicted, planned around, and then designed to eliminate. System T delivers a reliable, affordable solution to the growing broadcast market and is driving growth for the company. The company wins the Queen’s Award for Enterprise in the Innovation category.

Synchro Arts Limited is a Surrey-based developer of audio processing technologies. The quality of images and audio delivered to consumers by film, TV and music recordings has risen dramatically in recent years, which make any audible flaws or dialogue errors in lip-syncing completely unacceptable. Revoice Pro provides pitch, time and other audio feature manipulation tools to film and TV dialogue editors as well as to music editors working on recorded vocal and instrument tracks. The company has developed innovative, patented, audio processing algorithms and software for transferring time-aligned features from one audio signal to another. The software is capable of instantly transferring timing and other performance features from one signal to another with a resolution of 10 millisecond intervals and with a high level of audio quality. This provides the industry efficiencies of time-savings, and production improvements, delivering superior quality results previously impossible. The company wins the Queen’s Award for Enterprise in the Innovation category. The company also wins the Award for International Trade this year.

Vision Engineering Ltd of Surrey, manufacturers of optical precision instruments, has been established since 1958. Their innovation is Lynx EVO, a high productivity eyepiece-less stereo microscope providing exceptional ergonomic performance for intricate inspection and manipulation tasks in industries such as telecoms, precision engineering and medical device. Operators are often required to multi-task, performing tasks such as inspection combined with manipulation or assembly (e.g. soldering) and computer operation. Critical and lengthy inspection together with multi-tasking can lead to operator fatigue, potential stress and repetitive strain problems. The company’s proprietary and patented technology called Expanded Pupil Effect is produced by a multi lenticular micro array. This requires the manufacture of surfaces with hexagonal optical structures varying in width from 6 - 10 microns, with sufficient fidelity to provide high resolution images. Global success of the product has enabled the company to develop substantial new research and development capabilities to deliver future innovation. The company wins the Queen’s Award for Enterprise in the Inno-
Xtrac Ltd has designed and developed an Integrated Lightweight Electric Vehicle (ILEV) range of gearboxes targeting the growing single-speed electric vehicle (EV) market, serving, in particular, the high-performance automotive sector. Established in Berkshire in 1984, the company has built its reputation and brand in the global motorsport market, developing and supplying high-performance transmission systems. Identifying an opportunity in the growing EV market, the company has applied its engineering and technology capabilities along with advanced materials and revolutionary designs to develop its high-performance ILEV transmission system. Xtrac has designed the gearbox family to deliver flexibility for gear options (for acceleration or top speed). It’s also compatible with a range of electric motor designs. The gearboxes can be configured for high precision differential or torque vectoring and packaged for front-wheel drive, rear-wheel drive or four-wheel drive vehicles. Aston Martin, McLaren, Williams and other luxury car brands are including the ILEV technology in their future models. The company wins the Queen’s Award for Enterprise in the Innovation category.

Sussex based ADF Milking has designed and manufactured an innovative product that helps reduce the incidence of mastitis in dairy cows, for which it won the Queen's Award for Innovation in 2013. Following high sales growth in the UK the company investigated overseas markets, conducting appropriate market research to identify a priority target list. Utilising the model it adopted in the UK and modified for local conditions it has seen export sales grow by over 50% in the last three years. Overseas sales now represent three quarters of its business. ADF Milking Ltd. wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Benchmark Woodworking Ltd is based in Kintbury, Berkshire and started trading in 1986. The business was founded by Terence Conran and Sean Sutcliffe with a sustainable approach to design and making beautiful, healthy, sustainable and ethical furniture for commercial and residential interiors using traditional craft techniques alongside innovative technology. With uncertainty over Brexit they increased focus on overseas business by leveraging their existing clients, specifically in the United States. Their business has grown from just three people to a team of 61 with workshops in Berkshire and Dorset. The company has demonstrated exceptionally steep year on year growth with overseas sales rising by 842% overall in the three year period, with the majority of the overseas business in the United States. The company wins the Queen's Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.
Established in Southampton in 2011, Covec Limited is now selling their innovative technical textile Covec in 14 different countries, with main markets reaching across Europe and as far as North America, Australia and New Zealand. The company developed the groundbreaking textile by re-engineering an otherwise inflexible liquid crystal polymer to achieve abrasion resistance, moisture regain qualities and low thermal conductivity, all whilst enhancing the strength of the material. These properties make Covec the ideal textile for use in sportswear, military clothing and personal protective gear, as demonstrated by the success of Covec Limited’s own motorcycle clothing brand Bull-It, through which the company develop and launch products, such as specialised jeans, that prove the performance of the material in a high-octane environment. Over a six year period, overseas sales of Covec have increased by 587% with exports making up 53% of total sales. The company wins the Queen’s Award for International Trade for Outstanding Continuous Growth in overseas sales over the last six years.

Keen & Toms Holdings Ltd, trading as Hypnos Beds, is a family-owned business employing 530 people across Princes Risborough and Castle Donington. It is the third largest UK-based bed manufacturer by sales. It has been Carbon Neutral (PAS 2060) since 2011. The company was losing money ten years ago and sending 1,000 mattresses pa to landfill. Its decision to be the UK’s leading sustainable mattress manufacturer means the company is now financially viable and stable as well as selling 100% recyclable products and sending nothing to landfill. This is an excellent family company that has turned the business around in the last decade by a focus on sustainable development. In 2017, the company was awarded the Queens Award for Enterprise in International Trade. The company is awarded the Queen’s Award for Enterprise in Sustainable Development because they have a clear strategy to deliver sustainability objectives through innovation and working with the supply chain, demonstrating excellent results created by collaboration with partners.
CameraForensics is an award winning Bristol company formed in 2011. Their image analysis platform is used by law enforcement agencies in the detection and prevention of crime. The platform is capable of searching the internet and image databases, to link a known image to unknown images. It evaluates information including the device used to take the image, similarity of images, geographical location, and meta data to produce a list of images with apparent connections. When faced with terabytes of media, investigators can use BigSearch to automatically prioritise the relevance of the imagery to a case and determine which key images to focus on. The system proactively alerts investigators to new digital evidence leads and fresh intelligence on unsolved cases, as well as other agents searching for the same camera, enhancing productivity and cross-border collaboration. The technology efficiently delivers vital information resulting in faster victim identification and increased convictions. The company wins the Queen’s Award for Enterprise in the Innovation category.

Email Hippo Limited is a small company based in Cornwall incorporated in 2015 with 6 employees. The company wanted to solve their personal problem of being the victim of online fraud. Existing solutions were not viable, so they created the MORE API in-house and enjoyed a 90% reduction in online fraud in just two months. MORE is an email validation software service delivered via an API that helps businesses maintain clean data and reduce exposure to online fraud. MORE delivers certainty about two questions: whether emails can be delivered, and whether it’s safe to engage with an email address in day to day business transactions. Every email validated by MORE is checked for 74 datapoints, building a profile. Customers can act on the results of any of these data points accordingly. The company wins the Queen’s Award for Enterprise in the Innovation category.

Netcraft is an internet services company based in Bath which provides countermeasures against many forms of cybercrime, with the intent of frustrating the criminal and reducing the return on his time invested until the activity becomes not worth his time. Previously activities such as anti-phishing takedowns were typically performed by call centre staff in low wage economies. The company’s approach reduces the cost of dealing with one extra attack to near-nil, and introduces transparency, consistency of process and relentless incremental refinement. Organisations can be more assertive against cyber criminals and better protect their communities because of the extensive automation of the company’s services and their willingness to perform the countermeasures at a fixed cost per annum. Netcraft’s feed of phishing attacks is used by all of the major web browsers, thereby improving phishing protection for billions of people. The company wins the Queen’s Award for Enterprise in the Innovation category. The company also wins the Award for International Trade this year.

Founded in 1989 Exeter based Packexe Ltd have over 30 years experience creating high quality self-adhesive protection films. In 2009 the company used this knowledge to create Packexe SMASH, a unique tool for safer and more efficient vehicle extrication. Used by Emergency Services across the globe, SMASH is a time critical glass management tool that saves time and reduces risk of injury during vehicle extrication at road traffic accidents, to both the emergency services personnel and the casualty. A self-adhesive roll designed with a strong hold, specially formulated adhesive and the lightweight patented dispenser, means that by applying SMASH to vehicle glass strengthens by up to 42%. Glass becomes less likely to break and shattered pieces are contained. During extrication injury from broken glass is an added risk to all. The dispensing system and film perforations every 100mm makes the film easily operable by one crew member without the need for a knife resulting in crucial time saving benefits in critical circumstances. The company wins the Queen’s Award for Enterprise in the Innovation category.

Search Johnston Limited trading as Kaiasm is a software company based in Somerset. The company has developed a data set and visualisation toolkit that enables retailers, and public bodies, such as the NHS, to develop deep understanding of the expressed needs of the people they serve, and how well they are meeting those needs. Through aggregation, clustering, and analysis of competitor customer's searches, Kaiasm is able to re-align client's webpage content and language to be a better fit with their customers' thinking. This information architecture restructuring has delivered significant benefits to clients with examples of 25% sales increases achieved following implementation. The online marketplace is increasingly competitive and this service helps clients stand out from the competition and attract higher levels of web traffic. The company wins the Queen’s Award for Enterprise in the Innovation category.

Tomcat SNI Ltd

Email: nazia@tomcatuk.org

Gloucester based Tomcat SNI Ltd started in 2001 and produce a lightweight, transportable tricycle, accessible by adults with wide ranging mobility or disability issues. The Bullet tricycle is designed for adult users with mild to severe mobility or disability problems. There are five models in the range, four with power assisted options. The design of this range was a significant move away from the company’s expertise in children’s special needs tricycles. The company consulted physiotherapists and occupational therapists to understand the needs of adult disabled riders. They also consulted cycle technicians to understand the shortcomings of existing products. The resultant product has been designed to deliver a highly usable product. Novel solutions to problems were developed and three patent applications have been filed. The tricycles provide self-centralising steering, ease of adaptation to fit a trike to a rider, and Carer Control™ where riders require additional guidance. The company wins the Queen’s Award for Enterprise in the Innovation category.
Established in 2012, Unify Communications Ltd of Bristol have developed a novel business model and service which combines the products of ten vendors to deliver complete cloud-based telecommunication and call centre services. They have become recognised experts in their field delivering impressive benefits in improved customer service levels and cost savings to clients. The company works with ten major communications service vendors, combining their technological offers to deliver a unique mix of services tailored to their customers’ needs. Suppliers have recognised the expertise that the company delivers, and they are now certified Zendesk implementation partners (one of only a few in the UK), the only Platinum Fuze partner in the UK, and the premier UK partner of Serenova in the UK. The breadth of services that the company offer and the expertise that they have amassed sets them apart from their competitors. The company wins the Queen’s Award for Enterprise in the Innovation category.

The Celtic Sheepskin & Company Ltd business originally started 30 years ago as a small boot-making business founded by Nick and Kath Whitworth. After a period in private equity ownership, the original owners bought the business back in 2014. Since then the company has delivered successful and sustained growth as a direct to consumer retailer of premium womenswear, menswear and homewares and is now the UK’s leading manufacturer and supplier of sheepskin products. The company sells internationally through an e-commerce website, retailers and direct selling to the public. It now sells in over 60 markets worldwide and won the Queen's Award for International Trade in 2017. Over the last three years overseas earnings increased year on year from just over £1 million to just over £2 million, a rise in total of 94.6% and now account for over 25% of total sales. The company wins the Queen's Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Based in the Forest of Dean at Coleford, Gloucestershire, DPS Designs Ltd. was founded in 1995 with the simple objective of supplying the chocolate industry with high quality moulds. Having previously operated a chocolate manufacturing business where the margins were tight and the competition fierce, the company decided to move one step down in the supply chain and start pitching to previous competitors and now operates as a designer and manufacturer of chocolate moulds. Overseas earnings have grown by 140% over the last three years, and now make up 22% of all sales. Its main markets are Belgium, Germany, Ireland, Mexico, and France. It works hard to maintain its reputation for creativity in design, and understanding of the processes involved in making chocolate, technical innovation and market knowledge. The company wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Email: communications@byep.org.uk

Babbasa Youth Empowerment Projects CIC founded in 2013 is a social enterprise company based in Bristol. Babbasa works with young people aged 16-25 from ethnically diverse communities in Bristol where research found ethnic minorities compared very poorly with elsewhere in the country with unemployment rates double that of white counterparts. Babbasa works closely with community organisations, volunteers and agencies and recruits staff from the BAME community, (Black, Asian and Minority Ethnic) and partners with local employers to create ‘real’ opportunities to access work placements. The activities are based on ‘learning by doing’ rather than classroom based, creating a pathway for young people, working at their own pace to build their confidence, develop their skills, connect with employers and mentors and access meaningful work experience. Since 2013 the company has worked with 2200 young people (300 per year) all are from disadvantaged backgrounds and 80% of participants are from BAME backgrounds. The company wins the Queen’s Award for Enterprise in the Promoting Opportunity through social mobility category.

Email: kerry.odonnell@plymouthbus.co.uk

Plymouth Citybus runs bus services across Plymouth and Cornwall. The Company has an exemplary multi-dimensional approach to social mobility at the heart of all parts of the operation. Its programme includes a large number of initiatives including free travel to job seekers and a career transition programme helping military personnel find employment. The Chatty Bus initiative takes buses out into the community to help with services and reduce social isolation. Volunteers go out on a ‘feed the homeless project’ every 5 weeks on a converted bus. The applicant’s commitment to staff includes a disabled ambassador and training on dementia and disability awareness. All engineering staff have risen from the apprenticeship scheme. There is also a unique job share programme, enabling staff to share a working weeks rota allowing them time for caring responsibilities. Plymouth Citybus are the first transport company to be awarded Investors in People Platinum. The company wins the Queen’s Award for Enterprise in the Promoting Opportunity through social mobility category.

Triodos Bank UK operations opened in 1995 to demonstrate that you can marry a more sustainable approach to finance with commercial success and employs 189 staff in Bristol, London and Edinburgh. Triodos has always only financed companies, institutions and projects that add cultural value and benefit people and the environment, with the support of depositors and investors who want to encourage socially responsible business and a sustainable society. It won a Queen’s Awards for Enterprise in Sustainable Development in 2004 and 2010, plus several national business and environmental awards. It has been a Certified B Corporation since 2015. Triodos Bank is a global pioneer in sustainable banking, using the power of finance to invest in businesses, entrepreneurs and projects that are good for people and the planet in a transparent way. The company is awarded a Queen's Award for Enterprise in Sustainable Development, as it can demonstrate a strong sustainability ethos, leading the way in creating a more sustainable approach in the banking sector.
SPTS Technologies Ltd of South Wales was formed in 1984 and is a multiple previous winners of multiple Queen's Awards (Innovation 2018; International Trade 2013 and 2017). The company has been awarded this year for their development of a novel method of dicing silicon wafers using plasma cutting techniques which avoids damage to the die and delivers stronger, more reliable devices and high volume throughput for chip manufacturers that was previously unattainable. The patented plasma technology has thinner dicing lines meaning it can produce more and smaller chips from thinner, more flexible, wafers in less time on large wafer sizes. The Mosaic 300S Plasma Dicing System was the first to market production-ready dicing system for 300mm wafers on tape frames. In this fast growing market it is already achieving ~50% market share, winning the company new customers in new market sectors such as radio-frequency identification (RFID) tag manufacturers. The company wins the Queen’s Award for Enterprise in the Innovation category.

Email: sarah@ruthlee.co.uk

Corwen based Ruth Lee Ltd. started in 1994 as very much a cottage (or more specifically a barn) industry following an ad-hoc enquiry from the local fire brigade. It has now grown into a major supplier of manikins and other fire and safety equipment both in the UK and overseas. It has a strong strategic approach to its exports which has led to substantial increases in the value of its business overseas and the importance of exporting to the business as a whole. It is to be particularly congratulated on seeing its low market penetration in the USA, the home of its major competitor, as an opportunity, such that it is now the market leader in that country. Ruth Lee Ltd. wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Cyfle Building Skills founded in 2013 is a shared apprenticeship programme based in Carmarthenshire. The programme currently employs 120 apprentices across ten key construction trades including bricklaying, carpentry, electrical, plastering and plumbing and promotes construction as a sustainable career option. To deliver, Cyfle Building Skills collaborates with the Construction Industry Training Board (CITB), five local colleges, a university, local authorities and housing associations. Cyfle Building Skills apprentices are employed directly by Cyfle Building Skills, who coordinate their training and provide the site placements required for NVQ achievement. The flexibility of its approach enables construction firms of any size to get involved, overcoming the difficulties faced by employers in providing appropriate learning environments at the right time, and uncertainty about capacity to offer long term employment. For the apprentice it offers job security and ensures placements on active construction sites with the variety of experience required to succeed. The company wins the Queen's Award for Enterprise in the Promoting Opportunity through social mobility category.

Clynfyw Community Interest Company set up in 2011, supports disabled and vulnerable people using numerous meaningful projects as tools for learning, engagement, contribution and fun. It is based in Boncath, North Pembrokeshire, and employs 43 people. It has clearly demonstrated through its approach what sustainable development is all about, and shows equal efforts across many areas. The company’s world view is designed to challenge everyone – participants, staff, trustees – to look beyond the obvious, with priorities that are sustainable, local and global, and fair to all. There is a recognition of the importance of ethical concerns within a mixed economy. The extent that various stakeholders are involved in the creation of its plans and its willingness to learn, share and continually evolve is exemplary. The company is awarded the Queen's Award for Enterprise in Sustainable Development because its approach, impacts and results can be clearly demonstrated on both the local community and farther afield, globally.

Dresd Limited
Dresd Studios
878 Picketston, Lancaster Avenue
St Athan
Vale of Glamorgan

Tel: 07810567067
Email: lynn@dresd.co.uk

Founded in 2012 and based in the Vale of Glamorgan since 2017, Dresd Ltd works towards changing mindsets in one of the UK’s largest creative industries by reclaiming and reusing Film and TV sets. Its projects make substantial impacts in sustainable development. For example, the company derigged BBC Atlantis and reduced waste to landfill by 96% and saved 50% of clearance costs, repurposing through the local community, charities and others. The company is working with 80 production companies and customers like Bafta, British Airways, Buckingham Palace, Colin Firth, Comic Relief, The Guardian, Soho House, Stella McCartney and Vogue, diverting more than 116,000 tonnes of materials from landfill. The company is awarded the Queen's Award for Enterprise in Sustainable Development because it has demonstrated how it aims to transform an industry and drive forward sustainable improvements around reducing waste to landfill and working with young film makers in education to show them how to embed sustainability in projects.
3P innovation Ltd

3P Innovation Ltd of Warwick, is a custom automation company formed in 2006 to develop innovative manufacturing machinery and processes. Their application is for the development of Fill2Weight, a patented high-precision gravimetric filling technology for micro-dosing and weight checking pharmaceutical powders. The equipment combines stirring, vibration and carefully controlled apertures to ensure powders flow and are accurately weighed. They combined this with a simple user interface capable of rapid adjustment to deliver different powders. Fill2Weight is a component within filling machines which can vary in size from laboratory bench-top to full scale manufacturing. The company wins the Queen’s Award for Enterprise in the Innovation category.

Founder & CEO: Mr Paul Morris
Press Contact: Mr Karl Shaw
Tel: 01785 225656
Email: karl.shaw@addmaster.co.uk

Formed in 2000, Staffordshire company Addmaster (UK) Ltd has twice won a Queen's Award for International Trade. The company is a global leader in the supply of technically innovative, premium quality additives for the plastics, paper, textile, paints and coatings industries. Their successful innovation is the development of antimicrobial reusable plastic consumables, namely a patented “bag for life” carrier bag and reusable coffee cup, which eliminate waste and provide public health benefits. Reusing carrier bags and reducing single use plastics is seen by consumers as environmentally beneficial. However, the public are largely unaware of the potential for cross-contamination of food products through multiple use. The company conducted research in conjunction with Aston University and measured the potential for contamination with both carrier bags and reusable coffee cups. An opportunity to develop antimicrobial products was identified and the company used its Biomaster silver ion anti-bacterial technology to develop them. The company wins the Queen’s Award for Enterprise in the Innovation category.
Aeristech Limited

Tel: 07557 533457
Email: lyndsey.green@aeristech.co.uk

Leamington Spa based Aeristech Limited was established in 2006 to develop and commercialise a new type of variable speed electric motor. Once developed the motor was applied in the creation of a new high performance centrifugal air compressor. The compressor is used for air compression in automobile combustion engines, air side compression in fuel cells, and industrial air compression applications. The motor and compressor are protected with a portfolio of patents. For fuel cell applications the device replaces a positive displacement compressor and is smaller, lighter, costs less than half, and customers report a 40% increase in energy efficiency over existing compressors. For internal combustion engines the Aeristech eSupercharger enables a one litre engine to deliver the expected performance of a family saloon without a turbocharger and with both reduced fuel consumption and emissions. The company wins the Queen’s Award for Enterprise in the Innovation category.

Shropshire-based Grainger & Worrall Ltd was founded in 1946 and is an automotive casting specialist. In response to the global automotive market moving towards ever more complex and structurally sound castings, particularly in high performance aluminium alloys, the company has developed the next generation of aluminium and non-ferrous castings. Incorporating digital manufacturing and 3D sand printing technology the system enables customers to design, make and validate extremely complex components in short development cycles. The system delivers exceptional benefits to automotive component manufacturers where reduced costs, improved efficiency, and the ability to rapidly create complex parts is highly valued. By combining advanced manufacturing techniques with their extensive experience in the market, the company has created a novel system that is driving their continued growth and success. The company wins the Queen’s Award for Enterprise in the Innovation category.
Jonic Engineering Limited

Managing Director: Mr Peter Blakeman
Press Contact: Mr Peter Blakeman
Tel: 0121 707 8222
Email: peter@jonicengineering.co.uk

Birmingham-based Jonic Engineering Limited was formed in 1966 and has been manufacturing hydraulic cylinders ever since. They did not produce ejector cylinders prior to the invention but produced a range of conventional cylinders for a large UK manufacturer. Faced with severe contraction and the risk of losing the business, they innovated, and eventually patented, a new, lower cost ejector cylinder. They achieved this by designing a shaft that could be made from single pieces of chrome plated tube and did not use pistons or separate retaining glands. This saved on material and machining due to the faster and cheaper “centreless grinding” process. The company wins the Queen’s Award for Enterprise in the Innovation category.

TruTac Limited

Email: terry.ramsey@trutac.co.uk

TruTac Limited of Coventry started business in 1990 as specialist analysts of heavy goods vehicle (HGV) tachograph data. Identifying a market need they moved on to develop innovative software specifically designed for the passenger service vehicle (PSV) industry to manage drivers' hours and ensure compliance with regulations. PSV regulations are different to HGV regulations with specifics that become more complicated when considering operations across the EU. It took the company months to plan and map the logic required to account for the hundreds of variables that included ferry crossings, compensations, domestic or EU, period of availability, double manning, and working time directives reference periods. The software developed replaces the manual management of logbooks, tachographs, and reports, delivering significant cost savings, improved compliance reducing the risk of fines, and ultimately ensuring passenger vehicle drivers are safe on the road. The company wins the Queen’s Award for Enterprise in the Innovation category.
Accles & Pollock Limited

Gate 1

Email: phil.begley@libertyhg.com

Based in Oldbury West Midlands, Accles & Pollock was established over 100 years ago, but following changes in ownership to the Liberty Group, was re-incorporated in December 2015. It supplies low volume, precision manipulated tubular assemblies in specialist metal alloys for high integrity applications, mostly for the aerospace industry and also to nuclear, scientific, oil and gas and medical sectors. The company supplies directly to main markets in South East Asia, North America and Europe where global blue chip customers have a demand. The strategy involves investment in manufacturing and strengthening UK employee skills and the company is looking to establish a low-cost hub in India. Overseas sales have grown by 97% over the three year application period and the proportion of sales exported has increased to 53% of total sales. The company wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Coventry–based Arrowsmith Engineering (Coventry) Ltd started trading in 1967. The company is a specialist in precision turning, milling, thread rolling and grinding, providing components in titanium, nimonics, stainless steel, exotic metal and engineering plastics. It supplies aerospace tier ones and primes with parts used in aerospace engines, landing gears and air frames. Success has been based on developing strategic partnerships with clients such as Rolls-Royce, GKN, Meggitt and Pattonair, so that value can be added in the design stage. Its main current markets are USA, Singapore, Spain and Germany. Overseas sales have grown by 996% over the three year application period and the proportion of sales exported has increased from 6% of total sales in the first year of application to 39% in the final year. The company wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Founded in 2007 and based in Warwickshire, Drive System Design is an engineering consultancy that provides solutions to complex engineering challenges relating to power transfer (drivetrains) primarily in the automotive industry. It designs and develops drivetrains for internal combustion and electric vehicles, including control systems and power electronics. The company's customers are global vehicle manufacturers and tier one suppliers but business is growing in the defence, off road and aerospace industries. The company has a subsidiary in the USA and sells across the USA, Europe and Asia. Over three years it has achieved substantial year on year growth with overseas sales rising from £2.1m to £5.4m, a total rise of 155%. Over the period overseas sales as a percentage of total sales have increased from 36.3% to 49.5%. Its top 5 markets are Belgium, USA, Poland, Sweden and France. The company wins the Queen's Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Stiltz Limited, part of Stiltz Holdings Limited is based in Kingswinford in the West Midlands and started trading in 2010. Their Homelift is a compact and elegant product, specifically designed for domestic use, enabling homeowners to move between floors in their home without using a stairlift or having a large box-shaped through-floor lift. They grew overseas markets by leveraging knowledge of the international stairlifts sector and securing distributors who could quickly develop territories. They focused on high-performing territories initially and nurtured slower-moving markets until they performed in line with targets. They piloted a geographically demarcated 'Stiltz of ...' programme in the United States, assigning dedicated territories to individual high performing dealers. The company has demonstrated steep year on year growth in overseas sales rising by 140% overall, selling to the United States, Germany, Australia and the Netherlands. The company wins the Queen's Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.
Titan Steel Wheels Limited

Titan Steel Wheels Limited, part of Titan Europe Limited, based in Cookley near Kidderminster in Worcestershire started trading in 1991. The organisation with ultimate control is Titan International Inc, based in the United States. They have the largest manufacturing site in the world for niche steel wheel production for off road vehicles in construction, material handling, earthmoving and mining. Their strategy is about retaining their market share, growing it where they can, but certainly not losing it and weighing up the different values that different customers have, to stay relevant and ahead of the competition. They invest in people, training, process and product and understand how to deal with low-cost competition. The company has demonstrated steep year on year growth in overseas sales rising by 61% overall, selling in Sweden and Germany. The company wins the Queen's Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

In 2013 BigChange Limited was formed to develop and commercialise JobWatch, a pioneering business management software product for tradespeople and mobile workers. Initially it was launched as a hardware based vehicle fit system enabling the integration of back office administration tasks with remote worker activities in a paperless environment. The company worked closely with users in the field and identified that customers would be better served by a cloud served app system which could be accessed through remote worker mobile devices. This development of the initial product significantly reduced cost of adoption and opened their market by making it accessible to any sized organisation. Elements of the system are unique such as the ability for companies to collaborate and share documentation. JobWatch provides significant value to its users as is evidenced by the strong growth in customers, many from referral. The company wins the Queen’s Award for Enterprise in the Innovation category.

CarnaudMetalbox Engineering LTD

Tel: 01274 717667
Email: caroline.symonds@eur.crowncork.com

Established in 1930 West Yorkshire company CarnaudMetalbox Engineering LTD are two times winner of the International Trade Award. Having identified that the existing design of can interior lacquer spraying machines could be improved, the company developed Reformat which replaced the traditional mechanical drive with individual sprayer servo motors. This delivered significant energy savings (75%) and enabled high precision control over the spray process resulting in a reduction in the volume of lacquer used per can. When a number of these servo driven machines are situated next to each other on a production line, by carefully phasing the acceleration and deceleration of adjacent machines the regenerative braking effect of the servo motors can be maximised to reduce the overall amount of energy required to power the bank of machines. Reformat delivers more precise spraying, faster production speeds, easier variability in production speeds, and requires less manual intervention. The company wins the Queen’s Award for Enterprise in the Innovation category.

A common challenge in Safeguarding practice within schools has been that information or communication about an incident is "lost in the gaps" as staff often had a raft of methods to record instances and access information relating to a huge number of children, spread between a range of locations. Skipton based SME CPOMS Systems Ltd were first to recognise that there was a need for a system which could be used by all within the school bringing disparate information systems together. The company developed a unique online system where all staff in a school can log concerns relating to safeguarding, child protection, and virtually anything pastorally that can impact the wellbeing of a child. The flexible system allows the choice to monitor special educational needs, behaviour, medical and Mental Health issues, or even reward systems alongside Safeguarding - enabling the school to see how all of the above and more can affect each other. The company wins the Queen’s Award for Enterprise in the Innovation category.

Edward Pryor & Son Ltd trading as Pryor Marking Technology

Edward Pryor & Son Ltd trading as Pryor Marking Technology is an SME based in Sheffield that first started trading in 1849. They have won multiple design and manufacturing awards over the last five years. The company has developed a robotic laser system for improved quality, speed and reliability of marking vehicles during manufacture. All vehicle manufacturers in the world are required to permanently mark a unique 17 digit Vehicle Identification Number (VIN) onto every chassis that they produce. These codes are used to prevent counterfeiting and theft of vehicles, and are vital for traceability of vehicles during product recalls and safety campaigns. The technology replaces traditional engraving techniques which are time-consuming and imprecise. The new system can position a mark anywhere on a vehicle through the use of CCTV inside a protective light box. The company wins the Queen’s Award for Enterprise in the Innovation category.

GBUK Banana, a division of GBUK Group Ltd, a small company based in North Yorkshire has developed a safer way of re-positioning or transferring patients. Every year in the UK, thousands of people working in healthcare injure themselves moving patients. Versal replaces the need for multiple flat or tubular slide sheets. Its unique design can be used in every clinical situation, facilitating a full range of patient movement, with the functionality and versatility of both flat and tubular slide sheets. This minimises inventory, simplifies training requirements and helps to ensure universal compliance. The patented design includes extra-long distal and proximal flaps of material that reduces the risk of the patient being inadvertently pulled off the slide sheet onto the bed linen. Versal improves patient safety by ensuring all bony prominence’s of the patient are protected by two layers of slide sheet. This improves patient comfort and efficiency of care and reduces nursing time and the hidden costs of pressure ulcers or a musculoskeletal injury. The company wins the Queen’s Award for Enterprise in the Innovation category.

Teledyne Defence & Space, a division of Teledyne Limited

Teledyne Defence & Space (TDS) is a division of Teledyne Limited, a medium sized company based in West Yorkshire. A winner of a 2019 Queens Award for Enterprise in International Trade, the company specialise in the supply and development of microwave products for both defence and space industries. Drawing on its experience, the company developed an innovative flexible channeliser / frequency converter for small, low weight and power, telecommunications satellites in low earth orbit. The flexible channeliser / frequency converter changes the signal from a user terminal (perhaps in a school in a remote location) to the satellite then modifies the frequency to be transmitted back from the satellite to the ground for worldwide connection. Volume manufacturing for the space industry is a new requirement created by the emergence of satellite constellations. Over the past four years TDS have developed the skills and processes to become a recognised worldwide industry expert in this exciting and innovative venture. The company wins the Queen’s Award for Enterprise in the Innovation category.

Sheffield based Twinkl (Global Holdings) Ltd started in 2010 with a mission to help those who teach by providing high-quality educational resources. When major changes were announced in 2013 to the National Curriculum, the company recognised that all teachers would need to acquire new knowledge and create new lesson plans. Twinkl PlanIt provides a wide range of quality resources mapped to the curriculum, created by teachers and sold directly to teachers and schools. The resources include lesson presentations, creative and differentiated lesson activities, home learning tasks, challenge cards, fact cards, eye catching display packs, key vocabulary grids, and formative assessment materials. To provide the most appropriate materials the company conducted research, engaged with teachers, and recruited teachers to their team. Twinkl has developed a unique level of content, which is all created in-house and covering a broad range of subjects. Over 1,000 new resources are uploaded every week. In 2014 Twinkl PlanIt introduced complete planning to support the National Curriculum and empower teachers. The company wins the Queen’s Award for Enterprise in the Innovation category.

BTL Group Ltd was established in 1985 and is headquartered in Shipley, Yorkshire. The company provides assessment technology for the creation and delivery of computer and paper based examinations and has developed the Surpass Assessment platform which is now a world leader in exam creation and delivery, used internationally to create, deliver and mark over three million high stakes computer based exams every year. The Surpass system integrates into a clients overall business system to streamline the assessment process. It is now used in 144 countries across the world. Overseas sales have increased over three years from £2.2m to £8.3m, an overall increase of 277% and now account for 48.3% of total sales. The company has developed a successful export strategy based on its penetration of the USA market and is now replicating this strategy to expand its global presence. The company wins the Queen's Award for Outstanding Short Term Growth in overseas sales over the last three years.
John King Chains Ltd

John King Chains Ltd is a family enterprise with two of the fifth generation currently working in a modern production facility based at Sherburn in Elmet, North Yorkshire. Their principle activity is the manufacture of heavy series and bespoke conveyor chains used in the mechanical handling of bulk materials. The business has grown to approximately 100 employees with subsidiary, but standalone businesses, in Africa, South America, North America and Central Europe with plans to open in Australia in 2020. A new overseas market established recently was Iraq. Today their satellite businesses trade regionally, e.g. John King based in Poland covers Czech Republic, Slovakia and the Baltics. Otherwise the UK headquarters manages markets direct. Over the last three years overseas sales have grown by 77% and their top clients include: Kronspan Group; China Light and Power Hong Kong; and Sunds Fibretech Sweden. The company wins the Queen's Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.

Loadhog Ltd

Loadhog Ltd was established in 2003, and is based in Sheffield. It is employee owned and designs, manufactures, sells and pools returnable packaging solutions across a diverse range of industries. The team refined an entirely new concept, using plastic injection moulding to manufacture a lid containing spring loaded retractable straps as a replacement for stretch-wrap to securing pallet loads. Because of the complexity of the supply chain Loadhog invests in its own infrastructure and people in key target markets, with distributors in markets needing a service partner and the operation in France, with a focus on returnable packaging in mainland Europe. Overseas sales have grown by 180% over the three year application period and the proportion of sales exported has increased to 54% of total sales. The company wins the Queen’s Award for International Trade for Outstanding Short Term Growth in overseas sales over the last three years.
